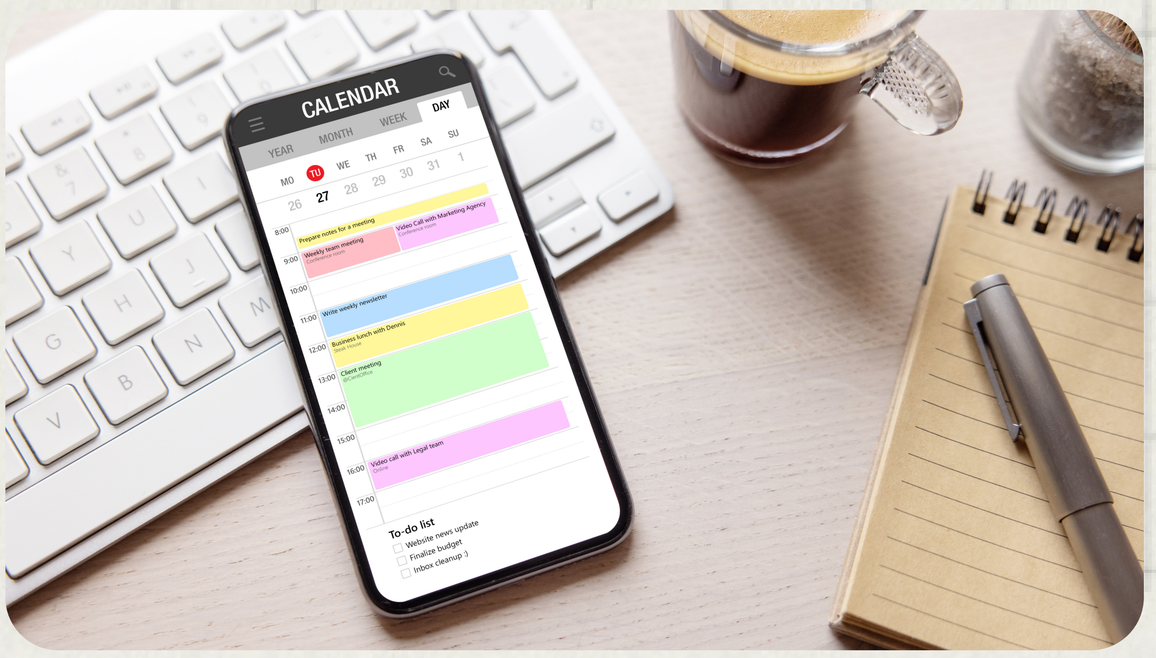
E - NOTES MOBILE APP

PROJECT REPORT

THE WAY YOU GOT, THE WAY YOU USE



This application allows users to edit their notes using smartphones. The project is specifically designed for mobile systems, ensuring that it can be easily used on mobile devices. With a user-friendly interface, users can effortlessly edit their notes without any hassle.

1.0 INTRODUCTION

As we navigate through the epoch of information technology, the advanced use of computer services has reached remarkable heights, firmly establishing itself as an essential instrument in our day-to-day lives. Information systems have emerged as a crucial linchpin, instrumental in maintaining regulatory compliance, bolstering sound management decision-making, integrating emerging records management technologies, and mitigating potential litigation risks. To maintain competitiveness and relevance in a cutthroat market landscape, it is imperative for any business to fully embrace the utility of modern information systems. These systems furnish a cost-effective and transparent channel for businesses to maintain seamless communication with clients and partners, fostering strong and long-lasting relationships.

Driven by the advent of rich multimedia applications, e-Notes have rapidly gained widespread acceptance, inducing a transformative shift in teaching and reading methodologies. The powerful fusion of e-Notes with rich multimedia elements and reading annotations provides an enhanced learning and note-taking experience, far surpassing traditional methods.

Inspired by this innovative progression, our research has culminated in the development of a comprehensive e-Note application system. This dynamic system affords users the ability to upload their PDF files to the application, effectively creating a shared pool of resources. Users can also download PDF files uploaded by others, promoting a collaborative learning atmosphere that transcends physical boundaries.

The application comes loaded with an array of versatile tools that cater to various note-editing requirements. To prevent any potential loss of valuable work, we have embedded a download function. This feature allows users to save their notes directly into their storage upon completion of editing. The application also supports text creation and drawing notes within the app itself, offering a multifaceted platform for note-taking.

This amalgamation of user-friendly features provides an interactive, engaging, and holistic user experience, revolutionizing the art of note-taking, and sharing in our digital age. By offering a platform that seamlessly integrates advanced features with a user-friendly interface, we are confident that our e-Note application system stands at the forefront of note-taking technology.

2.0 PROBLEM STATEMENT

1. Most application does not support pdf note editing.
2. The e-Note application doesn’t provide many tools for user edit.
3. Most e-Note application doesn’t need an account to access the system.

3.0 OBJECTIVES

1. Build the e-Note application that enable user to edit theirs pdf note.
2. Provide the many editing tools like color pencil, highlight, text, and eraser for user editing the note.
3. Provide the function for user register an account before they access the e-Note

4.0 SCOPE

The main users will be involved in this system and responsible. The users are Note taker, because there many people need to take note including students, lecturers, teacher, and other. After that the scope have admin and developer.

4.1 SYSTEM SCOPE

1. User:

- Upload note
- Add note
- Delete note
- View the note
- Draw Note
- Edit their note
- Make change to the e-Note
- Download the e-Note

2. Admin

- Manage the user feedback report
- Manage user account
- Solve account problem for user
- Full access for all function

3. Developer

- Update the system
- Make maintenance
- Fix error

4.2 USER SCOPE

- User
- Admin
- Developer

5.0 SIGNIFICANCE OF PROJECT

Our e-Note application system has been meticulously designed to enhance the user experience, beginning with a straightforward registration process. Prior to accessing the wealth of features offered by the e-Note page, users are prompted to register their account, ensuring the privacy and security of their personal notes and data.

Once registration is complete, users unlock the ability to create their personalized text notes. The application's customization features shine here, as users can choose from a variety of colors to set for their notes. This not only adds a personal touch to the note-taking process, but also facilitates better organization and recall of the information.

Additionally, the application acts as a reservoir for the exchange of knowledge. Users have the capability to upload their own PDF files to the system, thereby converting their personal notes into a shared resource. What's more, users can also browse and benefit from notes uploaded by others, fostering a sense of community and collaborative learning.

In our quest for democratizing knowledge, any PDF uploaded by a user is made accessible to every user of the app. Upon selecting a note, users can open it with their preferred device's PDF application. From there, they have the flexibility to download and edit the note according to their needs, further enhancing their learning journey.

Recognizing the importance of customization in note-taking, we offer users the ability to edit their PDF notes within the app itself. A multitude of editing tools is provided, conveniently displayed at the top of the screen, ready for users to make changes to their notes. From making annotations to deleting notes no longer required, users have complete control over their learning material.

In addition to text-based notes, our application supports a drawing feature. Users can unleash their creativity on a blank page, adding another dimension to their note-taking capabilities.

Recognizing that constant improvement is the key to a robust and user-friendly application, we have incorporated a feedback reporting mechanism. Users encountering issues or having suggestions for improvement can effortlessly send feedback reports. These invaluable inputs are promptly received by our administrative team, who are committed to responding and acting swiftly to address concerns.

Lastly, the administration of the system is carefully managed by competent administrators who have full control access to the entire system. This includes permission to delete user accounts when necessary, ensuring the integrity and security of the application system. Through such comprehensive features and careful design, our e-Note application system strives to redefine the note-taking experience, truly bringing it into the digital age.

6.0 LITERATURE REVIEW

6.1 KEEP NOTE APPLICATION

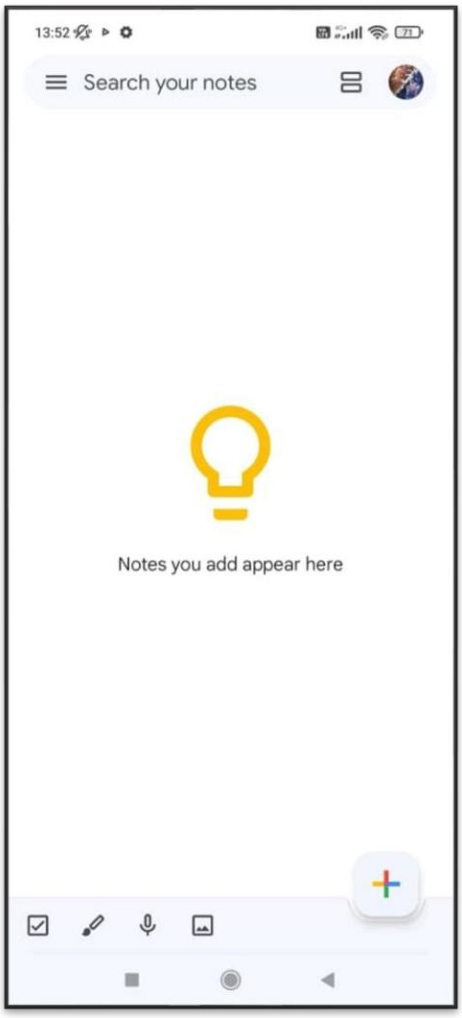

Figure 6.1.1 Keep Note Main Page

The advantages of the Keep Note application is the interface is simple and free for every user. The icons ae use is suitable to the function.

The disadvantages of the Keep Note it doesn't support the pdf upload function but it supports the text document. The tools prepared is less for user to make change the note. The tools are provided has theme, take photo, add image, drawing, recording and tick boxes. Besides that, the download function is not provided. Next is the user can update and delete the exists notes. After that the application is don't has security to secure user note.

6.2 NOTEPAD APPLICATION

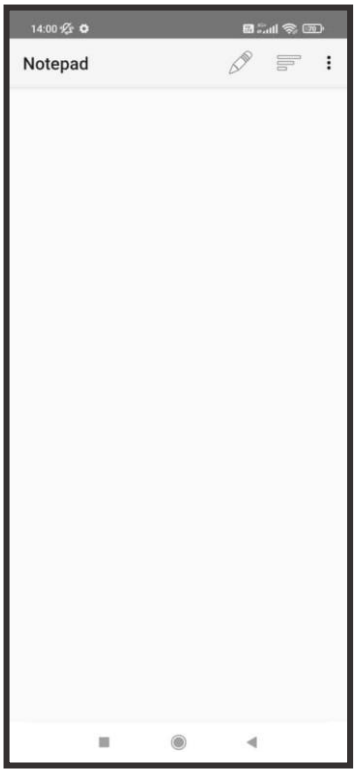

Figure 6.2.1 Main Notepad Application

The advantages of Notepad are the interface is very simple and easy for user explore.

The disadvantages of Notepad are the application don't support the pdf files; it only supports the text document. Besides that, the tools for editing the text document are not provided. Next there are no function to user to download the note inside the application to user devices. Lastly the application doesn't supply the security to the note.

6.3 BLACKNOTE APPLICATION

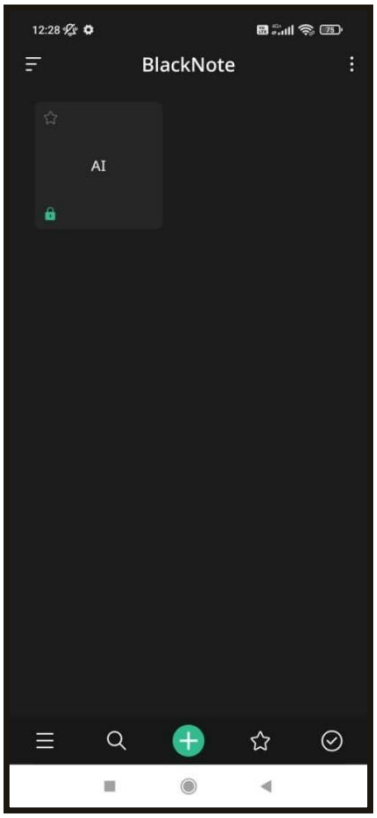

Figure 6.3.1 BlackNote Application

The advantages of the BlackNote are the user can set the password to the note when open the note next time. Next is the system design is simple and easy for user to explore. Besides that, the system also provides the function download.

The disadvantages of the BlackNote are it doesn't provide the pdf upload function and the tools editing provided is less.

6.4 FLEXCILL APPLICATION

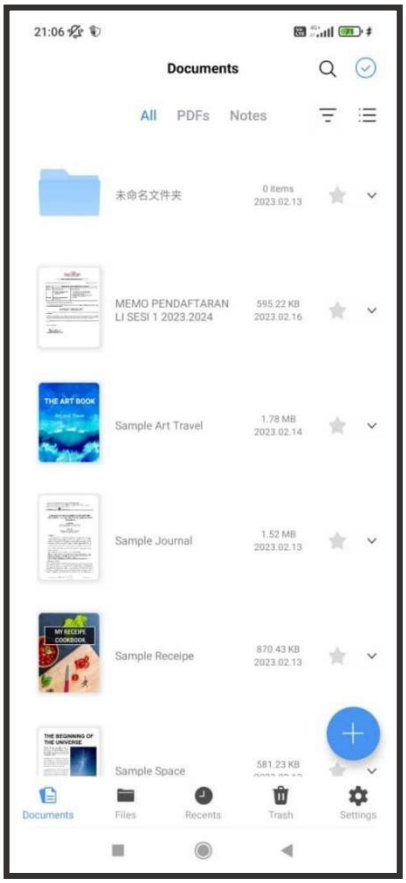

Figure 6.4.1 Main Page Flexcill Application

The advantages of Flexcill are have function support the pdf files and text document. It is also having many tools to make change to the note but there are some tools have to paid before access. Next the function downloading note also provided. Besides that, the interface is interesting the icon and files placement is very good and arrange.

The disadvantages are the application is not secure because the note is not secure. The other people can just open the note.

6.5 SKETCH ON PDF APPLICATION

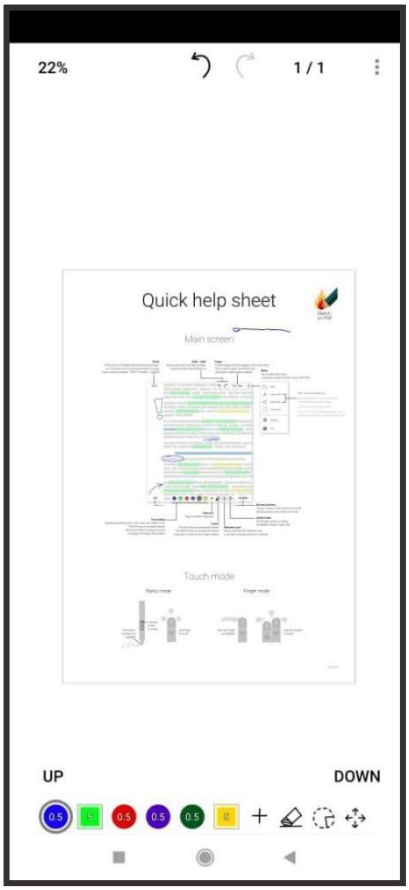

Figure 6.5.1 Main Page Sketch on PDF Application

The advantages of this app are it support the pdf files. Next the note also can download by user to save inside their device. The application is user friendly, when user open the app the pdf introduction is display at main page to help user understand application.

The disadvantages are the tool of the editing is very less, it is hard for user reach some action. Besides that, the note is not secure, the application doesn't provide any function to user register account.

6.6 EVERNOTE APPLICATION

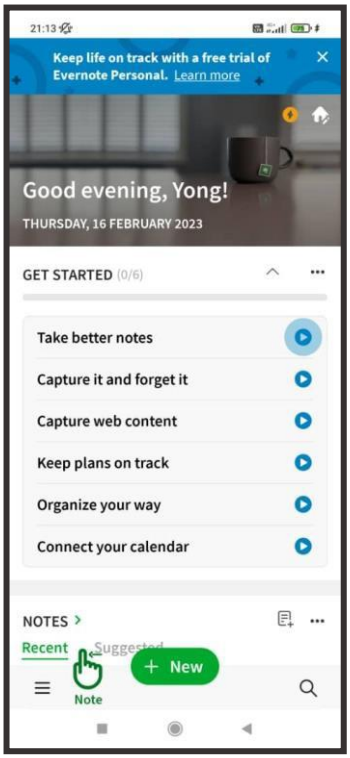

Figure 6.6.1 Main Page of Evernote Application

The advantages of Evernote are user friendly, because when user open the application for the first time it will display the tutorial to help user access the system functions and other. Next it also allows user to download the note for user access offline.

The disadvantages of Evernote is the application doesn't support pdf files. Then the editing tools to edit text document is less and mostly is need to paid. Next the system just provide account registration for user register member and no security.

6.7 NOTEWISE APPLICATION

Figure 6.7.1 Main Page of Notewise Application

The advantages of Notewise are the application support the pdf files but the note limit is 3, if want to create more user have to pay. Next, the functions and tools provided are completed and useful to do note. When finish do note user can download it. The interface of the Notewise is clean and simple.

The disadvantages are the Notewise application is not secure, the system is no provide account registration to access system, so the note make by user can access by any person who can attach the user devices.

6.8 COLORNOTE APPLICATION

Figure 6.8.1 Main Page ColorNote Application

The advantages of ColorNote are the interface easy for user understand and the icon use is suitable to the functions. Next is the system support the download function for user to download the note. Besides that, the system also provided function sign in for user to secure their note. The user can set the password for the note before access the note.

The disadvantages of ColorNote are the system doesn't support the pdf files. After that, the tools provided to edit note is less.

6.9 EASY NOTES APPLICATION

Figure 6.9.1 Main Page of Easy Notes Application

The advantages of the Easy Notes are the note layout is beautiful and nice. It looks simples and cleans. Next, the system also provides the download function but user have to paid for access that functions. Lastly, the security is provided to lock the user note, but user have to but the premium before access to those functions.

The disadvantages are the app functions is less and it not support the PDF file. The tools provided is too less and only 3 tools can be used. If need to unlock more user have to get premium.

6.10 COMPARISON TABLE

Icon	Support PDF file	Full range of tools	Provide Download	User friendly	Security
Keep Note	No	No	No	Yes	No
Notepad	No	No	No	Yes	No
BlackNote	No	No	Yes	Yes	Yes
Flexcill	Yes	Yes	Yes	Yes	No
Sketch on PDF	Yes	Yes	Yes	Yes	No
Evernote	No	No	Yes	Yes	No
Notewise	Yes	Yes	Yes	Yes	No
Color Note	No	No	Yes	Yes	Yes
 **Easy Notes**	No	No	Yes	Yes	Yes
Results of our application	Yes	Yes	Yes	Yes	Yes

Table 1: Comparison Note Mobile Application

In conclusion, our principal objective is to develop a highly functional application that champions user experience at its core. One of the primary features to be included will allow users to upload PDF files, thus serving as an effective platform for exchanging information and fostering collaborative learning.

To complement this feature, we have meticulously designed an array of editing tools to cater to a variety of note-taking styles. These comprehensive tools will ensure that the users have the flexibility and control to customize their notes according to their specific learning preferences and needs.

Moreover, we understand that in this digital era, accessibility is paramount. Therefore, we will also be incorporating a download function, enabling users to save notes and access them offline, ensuring their learning process is uninterrupted.

Attention to aesthetic detail is another key aspect of our design philosophy. We intend to create an interface that is not just user-friendly, but also visually appealing. The design will embody simplicity and efficiency, with easily recognizable icons that intuitively guide users through the various features of the application.

Another pivotal feature is the account registration functionality, which bolsters the security and personalization aspects of our application. This feature enables users to create their own private space within the application, with their notes and customizations securely saved under their account.

Lastly, our application will operate on a freemium model, providing users with an abundance of features for free, while also offering additional premium features that can be unlocked upon payment. This approach allows us to cater to a wide range of users, each with their own unique learning needs and budgetary constraints.

In essence, we are steadfast in our commitment to developing an application that combines functionality, aesthetic appeal, and user-centric design. We firmly believe that this approach will revolutionize the note-taking process, making it a more engaging, personalized, and effective learning experience.

7.0 METHODOLOGY OF PROJECT

The project will develop in Prototyping Model methodology. The system can be update and improve at the future.

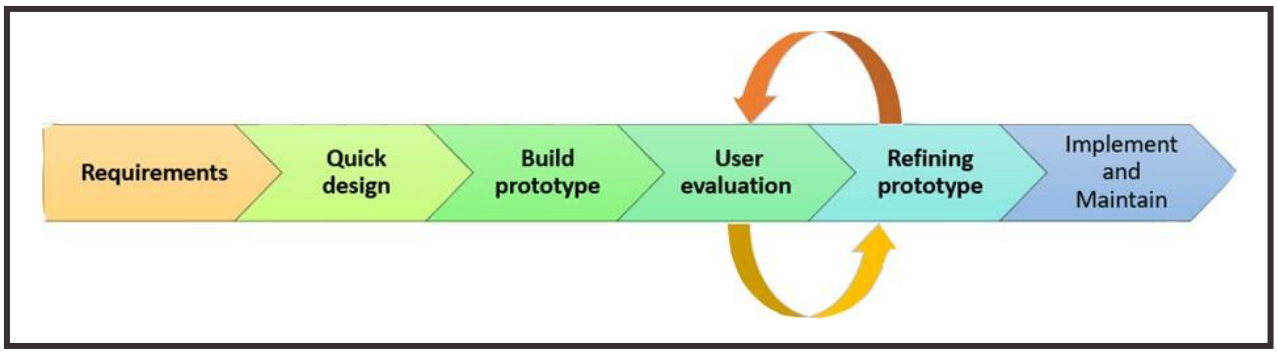

Figure 7.1 Process Prototyping Model

The reason we using prototype model to develop the E - Notes Mobile App, because we can make maintenance according to the user feedback and report. This can let our system to keep improving and follow the step of generation.

Step 1: Requirement gathering and analysis

At this pivotal juncture in our process, we are setting our sights on comprehensively planning the system. This stage is integral to our project, as it sets the framework for all subsequent actions. We are adopting a methodical approach, analyzing every aspect of the plan with meticulous detail to ensure its robustness.

Our analysis is centered on an empirical approach – gathering data directly from potential users. We have opted for the survey method to collect this data, as it allows us to gain a comprehensive understanding of the user's preferences and requirements. Our survey is targeted at Polimas students, a group we believe will be one of the primary users of our E-Note Mobile Application.

We have managed to survey 36 students, a sizeable sample that provides us with significant insights. From this sample, a noteworthy 83.3% of students have shown a preference for

using digital notes. This high percentage reaffirms our belief in the relevance and potential success of our application.

Post data collection, we delve deeper into understanding the system's functionalities and analyzing existing applications. We examine the current market offerings, gaining a holistic understanding of their strengths and weaknesses. This exploration helps us identify opportunities and gaps that our application could potentially address.

Moreover, we construct a comparison table to juxtapose various applications, critically examining their features. This tool provides us with a visual representation of the market landscape, helping us understand the competition better. We study the advantages and disadvantages of each application, using this information as a stepping-stone to design our E-Note Mobile Application.

In essence, we are striving to absorb the best elements from existing applications while innovating to deliver a superior user experience. We believe in learning from the successes and shortcomings of others. Thus, we plan to take the advantages we have identified and incorporate them into our application. Our ultimate goal is to create a product that stands out in the market for its unique features and user-centric design.

Step 2: Quick Design

In this stage of our development process, we focus on creating a foundational system that serves as a basic yet comprehensive representation of our E-Note Mobile Application. This rudimentary system, developed with meticulous attention to detail, is aimed to provide a thorough understanding of the proposed application. It elucidates our vision, helping us navigate the development process more effectively.

The process of shaping the user interface for our system has been embarked upon using the “Pencil” software. Chosen for its versatility and user-friendly features, this software has been instrumental in bringing our ideas to life. It provides a canvas for us to visualize and experiment with the look and function of our E-Note Mobile Application, paving the way for a refined design that resonates with user expectations.

We've adopted a storyboard style to design the system interface. This style was chosen due to its inherent capability to foster a clear, sequential understanding of the system's operations. It helps us present the various functionalities of our application in a manner that is logical, intuitive, and visually appealing. This approach provides us with a platform to craft an interactive narrative around our application, making it easier for us to comprehend and convey how each function would contribute to the user experience.

The storyboarding process allows us to break down complex operations into smaller, manageable parts. Each part can then be assessed and designed independently, before being integrated into the complete system. This step-by-step approach aids us in maintaining a high level of precision and accuracy throughout the design process, ensuring each element functions as intended within the larger ecosystem of our application.

In conclusion, the purpose of this stage is to provide us with a robust blueprint that informs and guides our development efforts. We believe that a strong start lays the foundation for a successful journey, and that's what we aim to achieve through this comprehensive and methodical process. Our goal is to evolve this simple system into a full-fledged application that effectively addresses user needs and surpasses their expectations, thereby creating a truly unique and valuable E-Note Mobile Application.

Storyboard Application:

Step 3: Build a prototype

As we embark on this crucial stage of our project, we delve into the crux of our endeavour - the development of the E-Note Mobile Application. This stage signifies a pivotal transition, one that moves us from the realm of conceptual plans into the tangible world of action. Our development efforts are firmly grounded in the foundation of the information requirements meticulously laid out in the quick design stage, ensuring that every step we take aligns with the fulfilment of those needs.

As we immerse ourselves further into this development process, our primary focus is on sculpting a user interface that marries aesthetics with functional efficiency. As the interface serves as the first touchpoint between the user and our application, we have meticulously designed it to be both inviting and intuitive. Our goal is to ensure users feel at ease and fully engaged from their very first interaction.

At the core of our application's functionality lie three integral features - the upload, edit, and download buttons. These buttons are the lifeblood of our application, providing users with the ability to upload their PDF files, annotate or modify as needed, and then download the edited files. In this phase, we place utmost importance on ensuring these buttons are easily identifiable and function flawlessly.

But our commitment to delivering a high-quality product doesn't cease at functionality. We strive to elevate the user experience by ensuring that these features execute their tasks not only smoothly but also swiftly. We understand that time is of the essence for our users, hence we relentlessly work towards minimizing any potential lag in the operation of these features.

This development phase is characterized by a rigorous, cyclical process of design, development, testing, and refinement. Our objective is to craft an application that functions seamlessly, exudes aesthetic appeal, and most importantly, caters to the diverse needs of our users. While the journey might be intricate and demanding, we remain unwaveringly driven by our commitment to delivering a product that exceeds expectations.

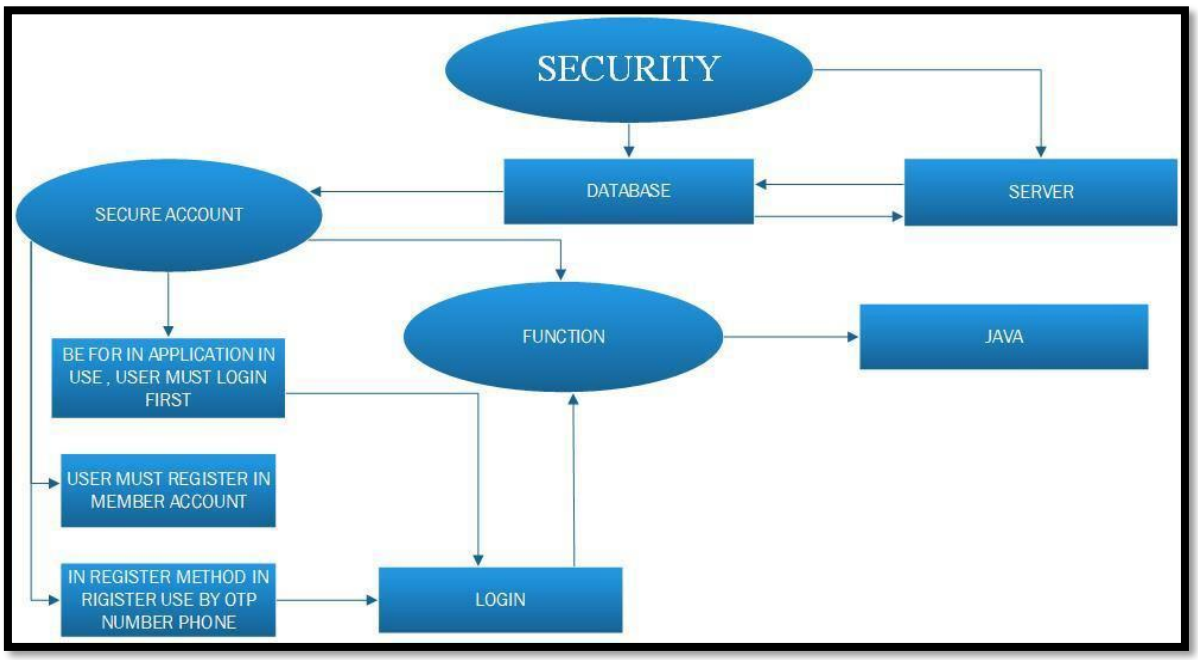

Figure 1 : Security Mothod Diagram

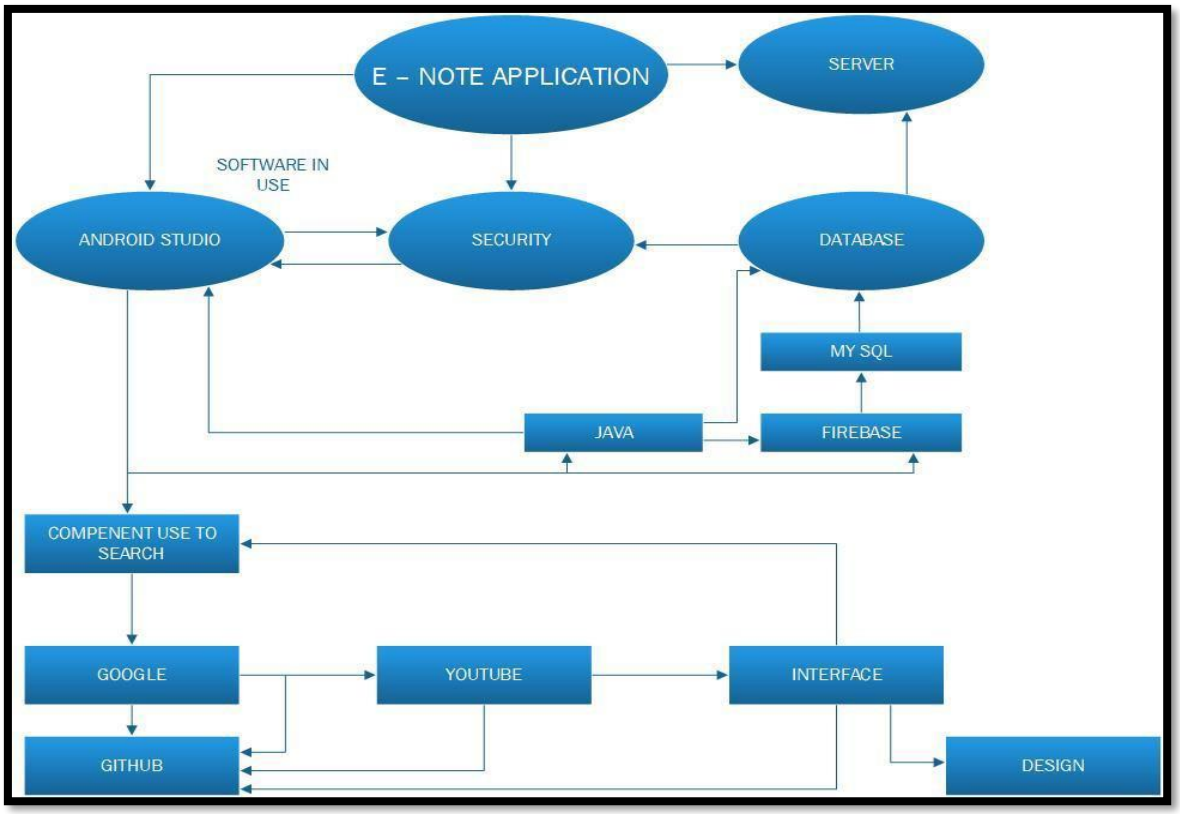

Figure 2 : Requirement of System Diagram

Step 4: User evaluation

In this critical phase of our development process, we're turning our E-Note Mobile Application over to the real-world users - the students of Polimas. We believe in the value of practical evaluation as an integral part of product development. Here, our aim is not just to test our application, but to glean a fresh perspective that can only be provided by those who will ultimately use it.

Once the initial testing has been undertaken by the students, we shift our attention to their invaluable feedback and suggestions. These insights, borne out of their firsthand experience, form a vital part of our process of refining and enhancing the application. They act as the compass that guides our efforts in the right direction, ensuring that our work aligns with the expectations of our user base.

Moreover, this feedback isn't just restricted to the identification of issues or gaps in the application. We are equally interested in their ideas for potential enhancements and features that could elevate the user experience to a whole new level. By establishing this feedback loop, we are effectively building a bridge of communication with our users, empowering them to influence the evolution of the application.

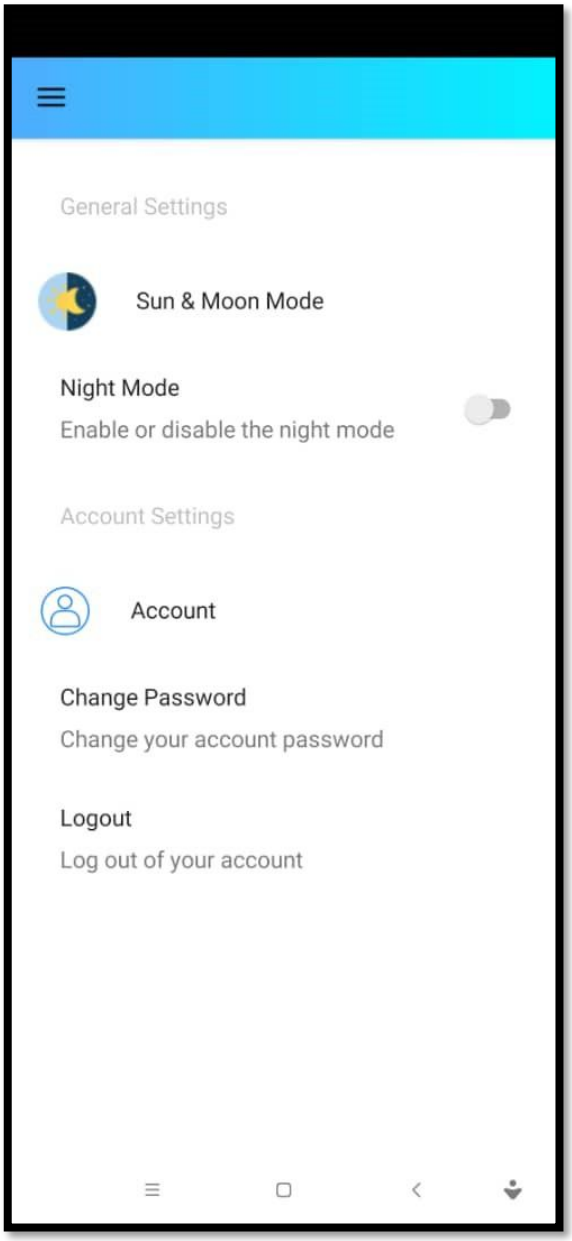
This stage is marked by a two-fold focus: collection and implementation. Once the feedback is collected, we strive to diligently implement the relevant changes to improve the E-Note application system. We take pride in being responsive to our users' needs and committed to continual improvement. We view each piece of feedback as an opportunity to grow and innovate, driving us towards the goal of delivering an application that not only meets but exceeds user expectations.

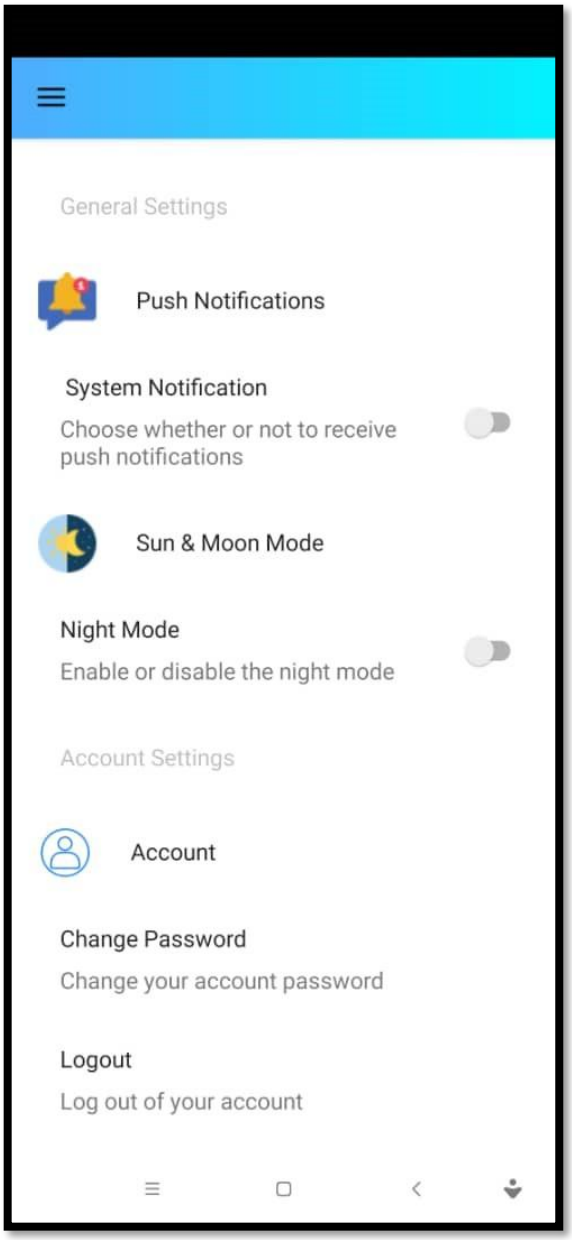
Appendix Evaluation :

No	User	Percent (%)
1	Students	70 %
2	Non Students	20 %
3	Other	10 %
	Total Percent Of User Evaluation	100 %

Step 5: Refining prototype

At this stage, the prototype will make refine according to the user feedback and suggestions. This might involve adding new features, refining, or addressing any issues identified during the user evaluation phase. The system develop will not over until the user is satisfied to the system.





Firstly, as a proactive response to the feedback collected from our users via an open form, we identified a significant need for enhancing the way we communicate updates to our application. We discovered that users were facing challenges in maintaining synchrony with the current version of the application. The lack of a structured system to keep users informed about new releases or the introduction of new features was a gap that needed to be addressed urgently.

In order to fill this gap and to improve user experience, we introduced a dedicated notification function into our system. This is a step that signifies our continued commitment to making our application more user-friendly and to ensuring that we take our users along in our journey of continuous improvement.

The notification function has been thoughtfully designed keeping the utmost convenience of users in mind. Now, whenever the company decides to roll out an update or introduce a new feature to the application, users who have enabled the notification function will be kept abreast with these changes in a timely and efficient manner.

A mere act of enabling the notification button on their end allows users to stay connected with us and to keep their application up-to-date without any extra effort. As soon as an update is released, users will receive an immediate notification informing them about the latest version and any exciting features that it may include.

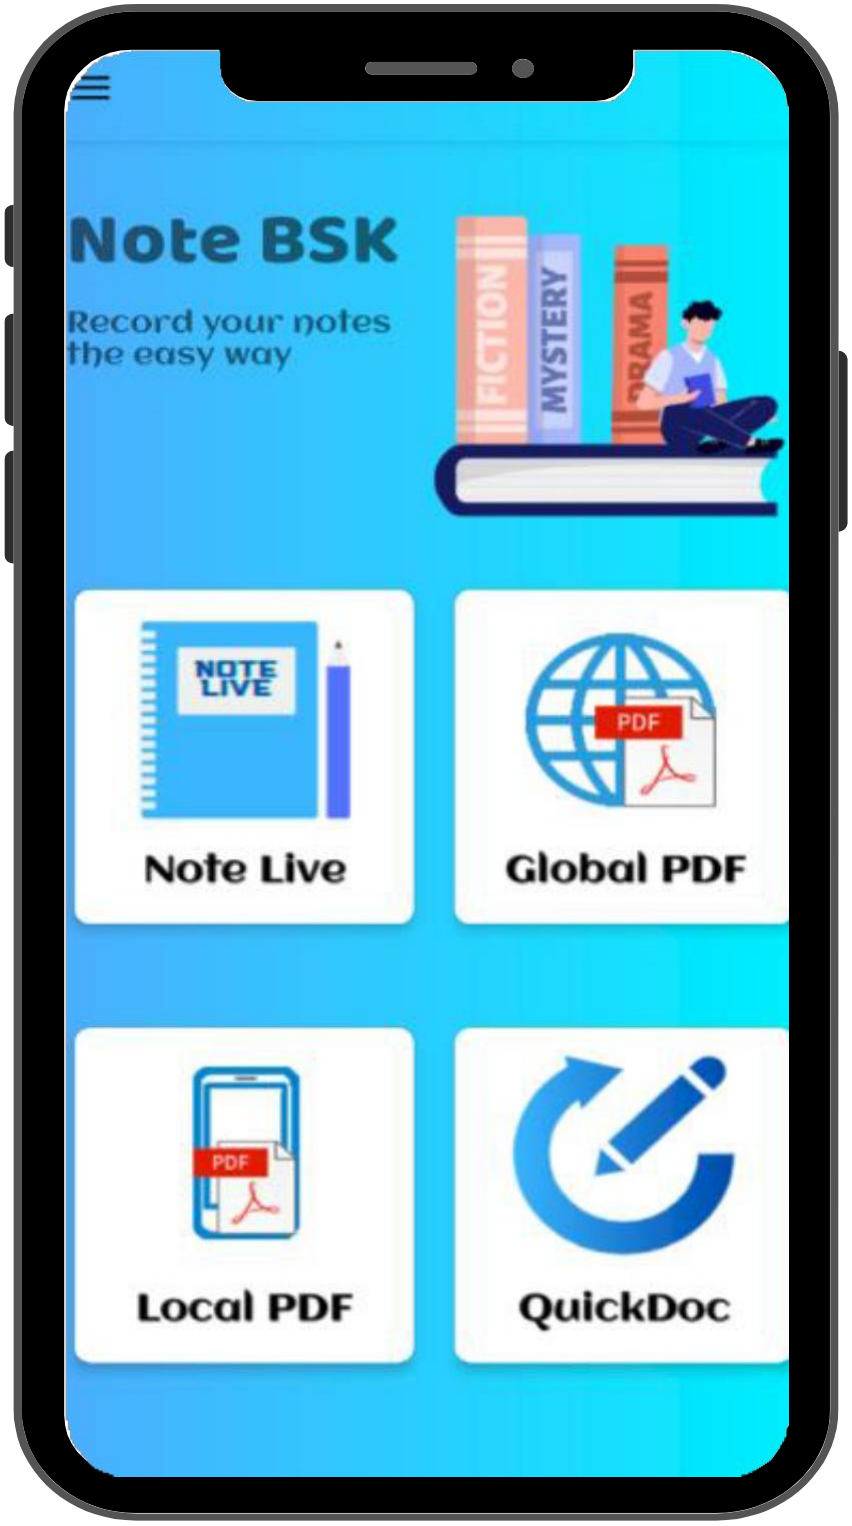
With this function, users no longer need to manually check the system repeatedly to verify if there's an update due or to fear missing out on any new feature. This eliminates any guesswork and reduces the cognitive load on the users, thereby making the process of staying updated as smooth as possible.

Our notification function aims to streamline the update process and bring information directly to users. It promotes a more seamless and intuitive user experience, ensuring users can benefit from the latest enhancements without any delay.

By facilitating timely updates, we aim to help users get the most out of our application as it continues to evolve. We remain steadfast in our commitment to making the user's journey as intuitive, enriching, and effortless as possible. This is a step forward in our pledge to maintain transparency with our users and to include them as integral partners in our journey of growth and continual improvement.

Step 6: Implementation system and maintenance

In this stage, the E-Note Mobile Application is developed based on the final prototype. After that the system will tested and deployed to production. Lastly the system will make maintenance to prevent the error happening.



8.0 INTRODUCE AND INFORMATION OF MOBILE APPLICATION

This is our team make the Mobile System Application of this project :

8.1 SPLASH SCREEN FOR APPLICATION

Figure 1 : Splash Screen

Figure 1 introduces the users to our application with a tastefully designed splash screen. The moment a user gently taps open our e-Note application, they are greeted by this visually appealing gateway. It is more than just a static graphic; it stands as a vivid reflection of our commitment to sophistication in design and user experience, setting a positively engaging tone for the user's journey right from the get-go.

This splash screen serves a dual purpose: it is visually compelling and functionally informative. It does not merely exist to entertain the eye; it also subtly signifies the system's status as it diligently prepares the application for the user. In a sense, it operates as a welcoming and patient host, keeping users engaged as the back-end processes swiftly align to facilitate their entry into the application.

Furthermore, the splash screen strikes an artful balance between aesthetic appeal and user communication. By employing appealing visuals and a thoughtful layout, it conveys the

system loading process without burdening the user with technical details. It turns what could be a mundane wait into an anticipation-filled moment, paving the way for an engaging user experience that awaits beyond the loading process.

The splash screen is our application's first impression, an introductory handshake that reassures the user of the professionalism and user-centric design ethos that permeates our e-Note application. It is our first step in building a relationship of trust and mutual understanding with our users, a promise of the quality, convenience, and efficiency that the application is committed to delivering.

In conclusion, our splash screen stands as a testament to our commitment to seamlessly blending form and function. It embodies the core principles of our e-Note application - convenience, efficiency, and design elegance - while simultaneously narrating the process of system loading in an engaging, user-friendly manner. This is how we invite users into the world of e-Note: not merely with a static screen, but with an interactive, informative, and visually appealing gateway.

8.2 VIEW PAGE OF APPLICATION

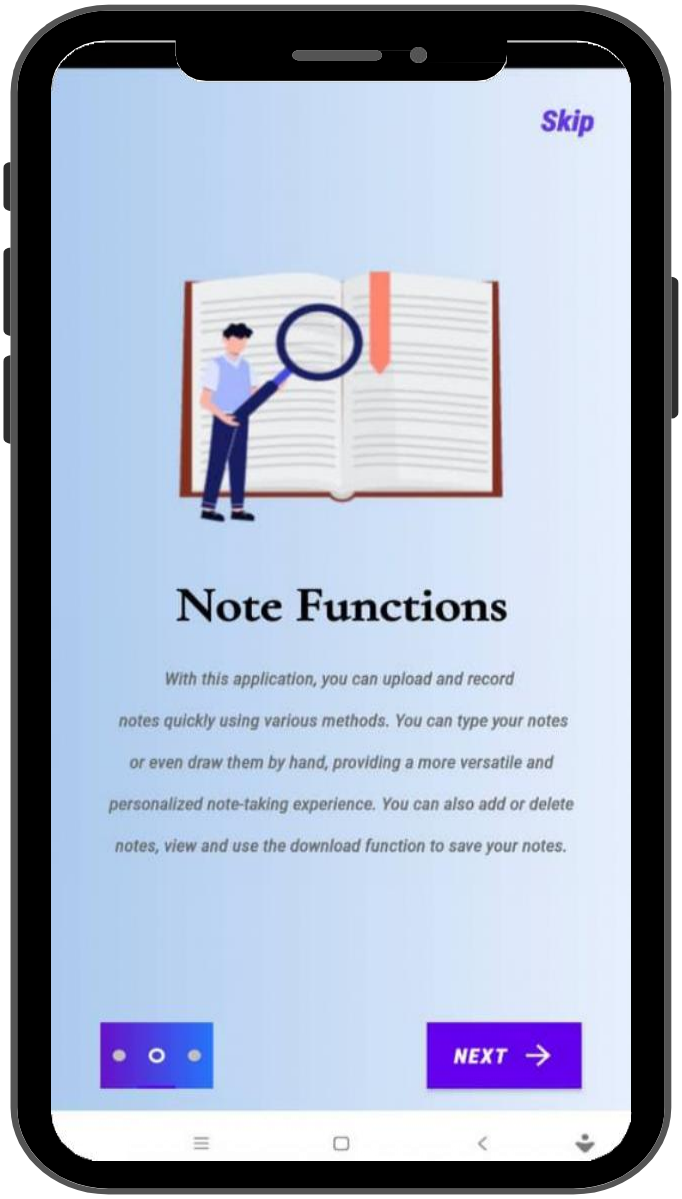


Figure 2 : View Page Note Function

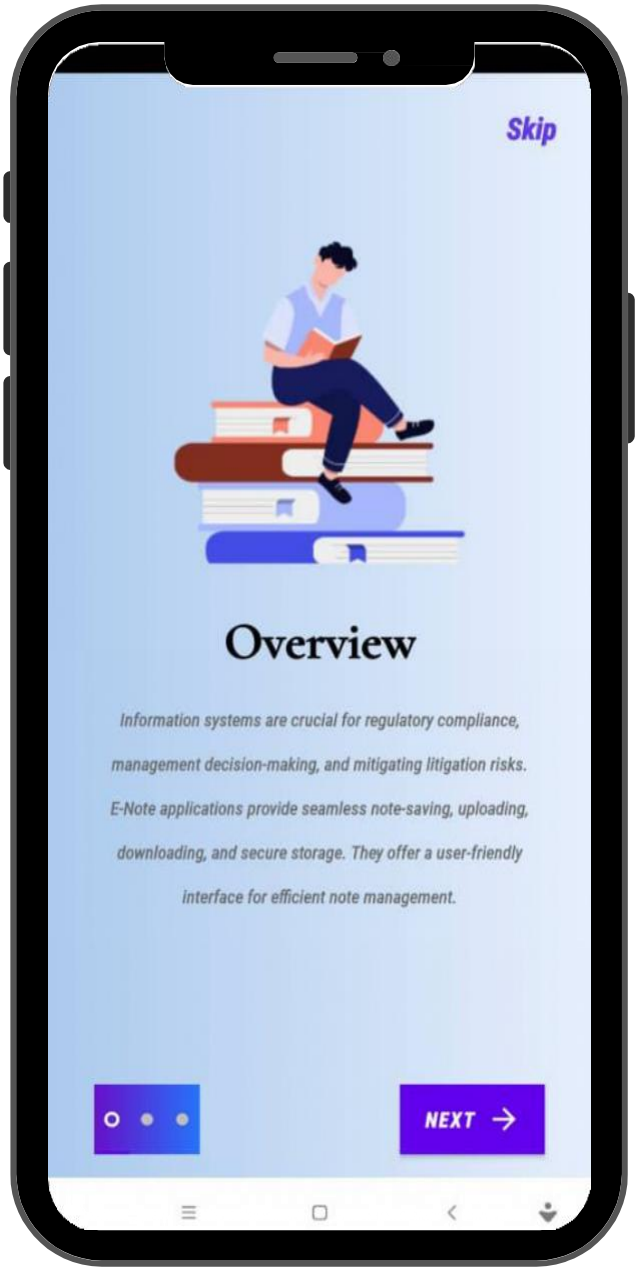

Figure 2 : View Page Note Overview

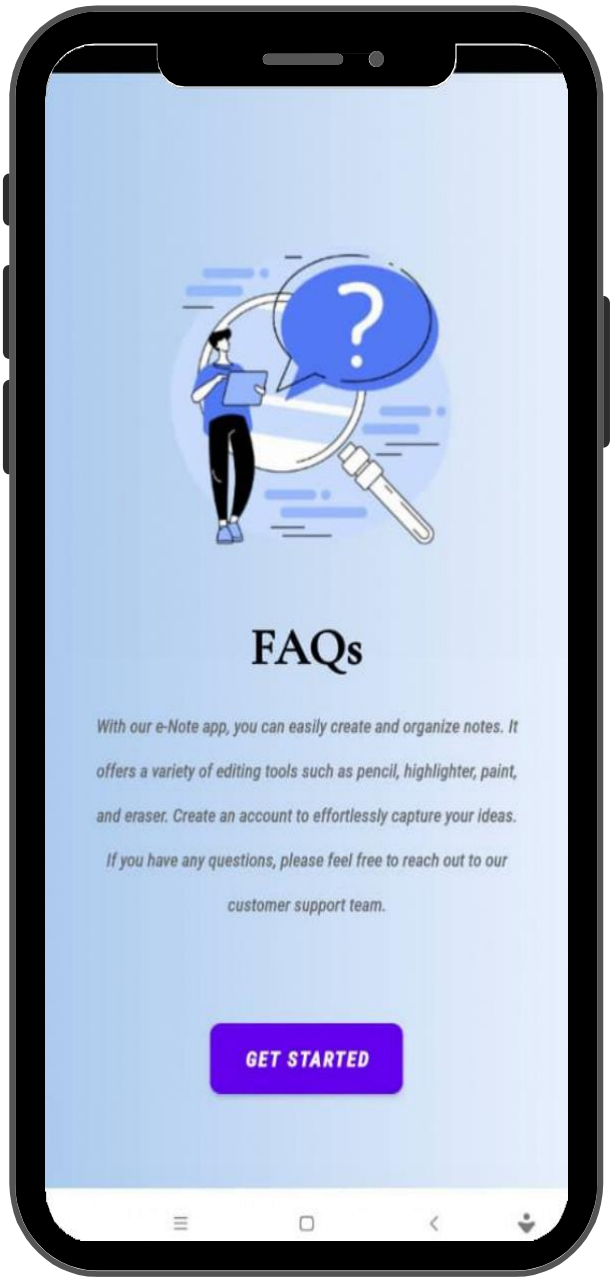

Figure 3： View Page Note FAQs

Indeed, Figures 1, 2, and 3 collectively present a comprehensive tableau of information, articulating the myriad functionalities of our e-Note application. These graphical portrayals serve not just as a visual guide to the application's array of features, but also assist in acclimating users to its various design elements and interactive modules, facilitating a seamless and intuitive browsing experience within a single view.

Furthermore, this layout is designed with a deep understanding and consideration of users' needs. During their inaugural visit, users are presented with all the necessary knowledge and tools to navigate the application effectively, ensuring they are well-equipped to leverage the platform's potential fully. However, we understand that as users become more familiar with our application, the need for speed and efficiency naturally increases.

With this in mind, our system has been engineered to adapt to our users' growing familiarity. On all subsequent visits, users are promptly directed to the login page, bypassing the initial informative segment. This shrewd design choice is a testament to our commitment to creating a balance between providing educational information and maintaining user convenience.

We firmly believe in empowering our users, and this principle is deeply embedded in the fabric of our e-Note application's design. By ensuring that users are not just well-informed but also catered to in an efficient and timely manner, we strive to create an environment where users can interact with our application in a way that is both productive and enjoyable. This commitment to striking the right balance is a cornerstone of our user interface design philosophy, serving as a guiding principle in our ongoing efforts to enhance and evolve the e-Note application.

8.3 SECURITY MAIN PAGE

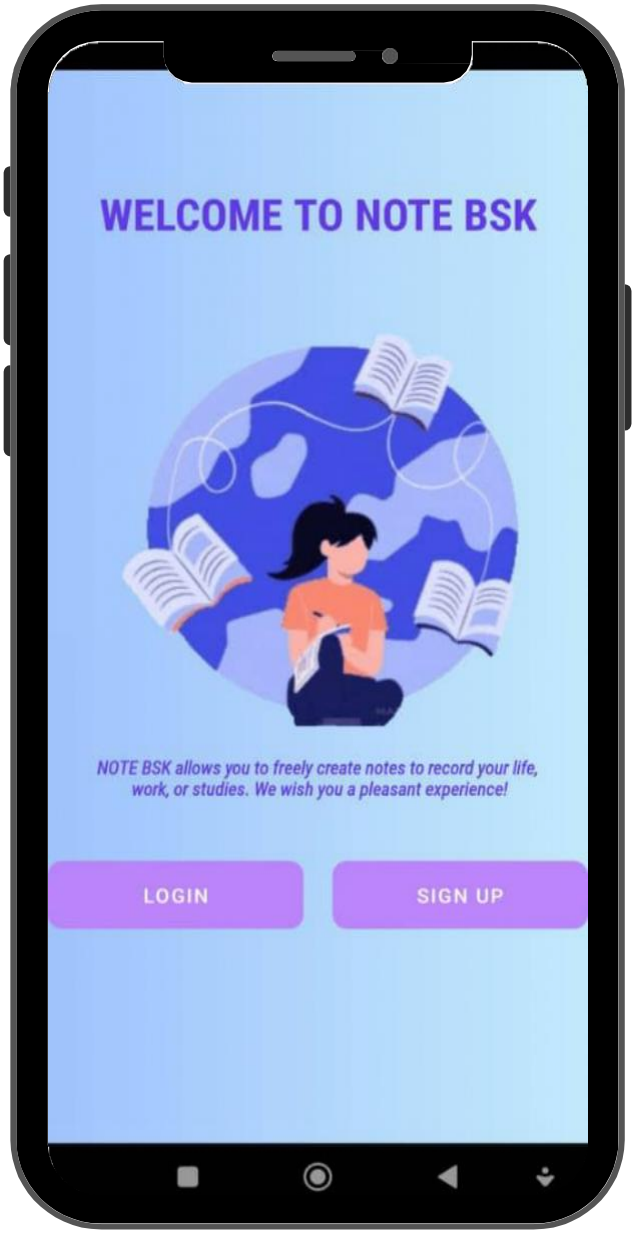

Figure 1 : Main page Security

Thus, on the landing page, users encounter two distinct buttons - 'Login' and 'Sign Up'. Upon clicking the 'Login' button, users are ushered to the login page where they are required to authenticate their credentials before diving into our application.

In addition, a click on the 'Sign Up' button navigates users towards registration, ensuring they are officially registered before they gain access to our system.

8.4 SIGN UP PAGE (REGISTER)

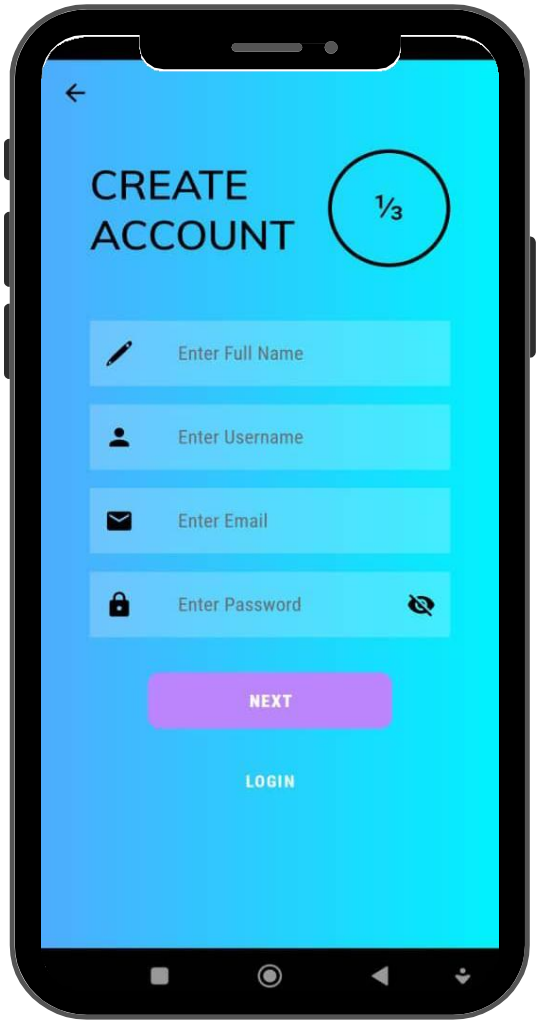

Figure 1 : Form Field Sign Up

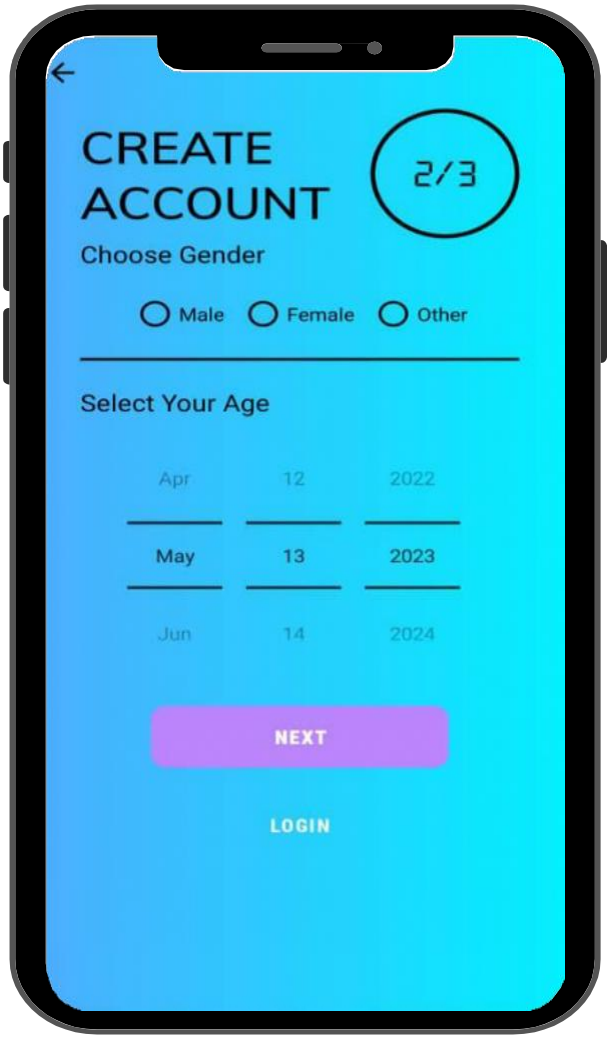

Figure 2 : Form Field Sign Up 2

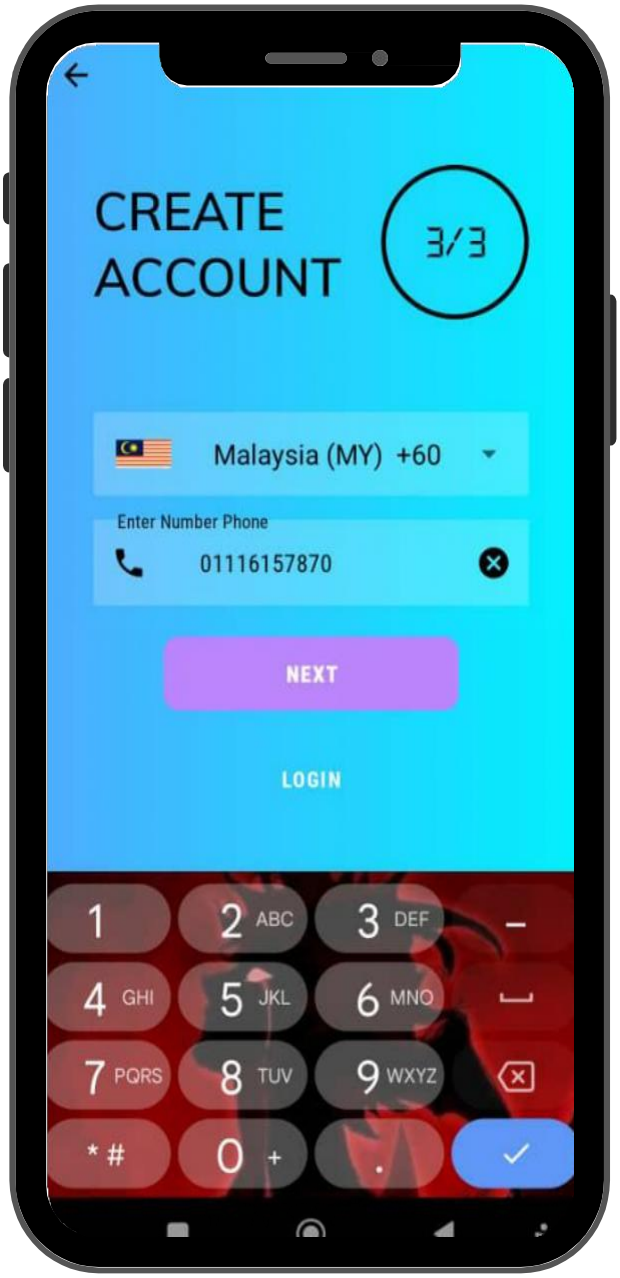

Figure 3 : Form Field Sign Up 3

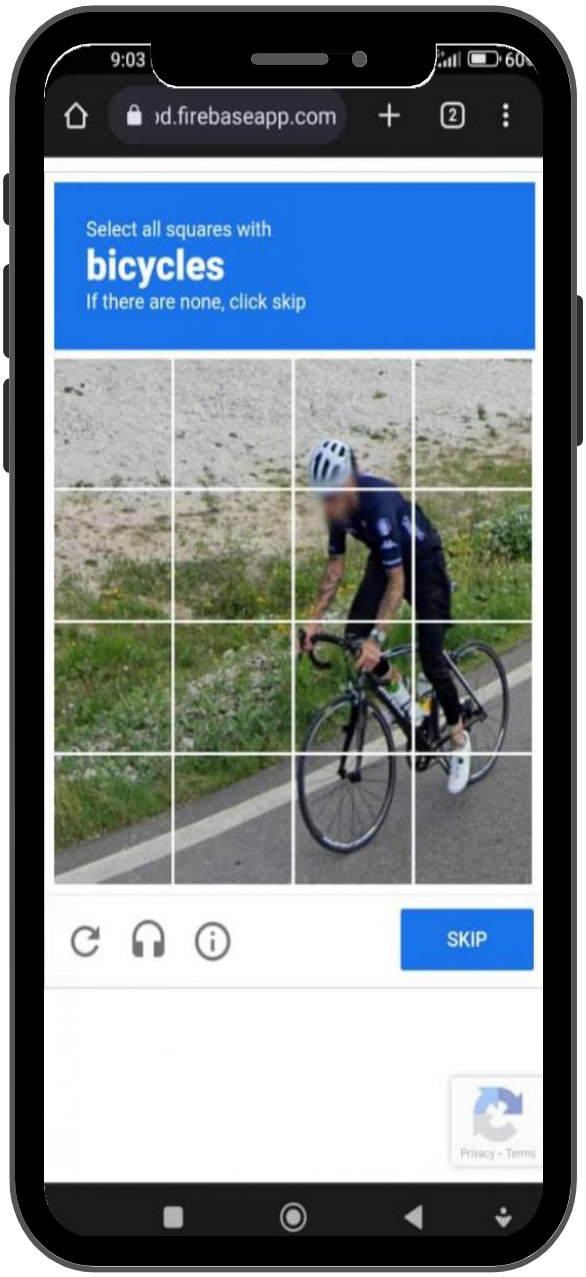

Figure 4 : Secure Of Sign Up

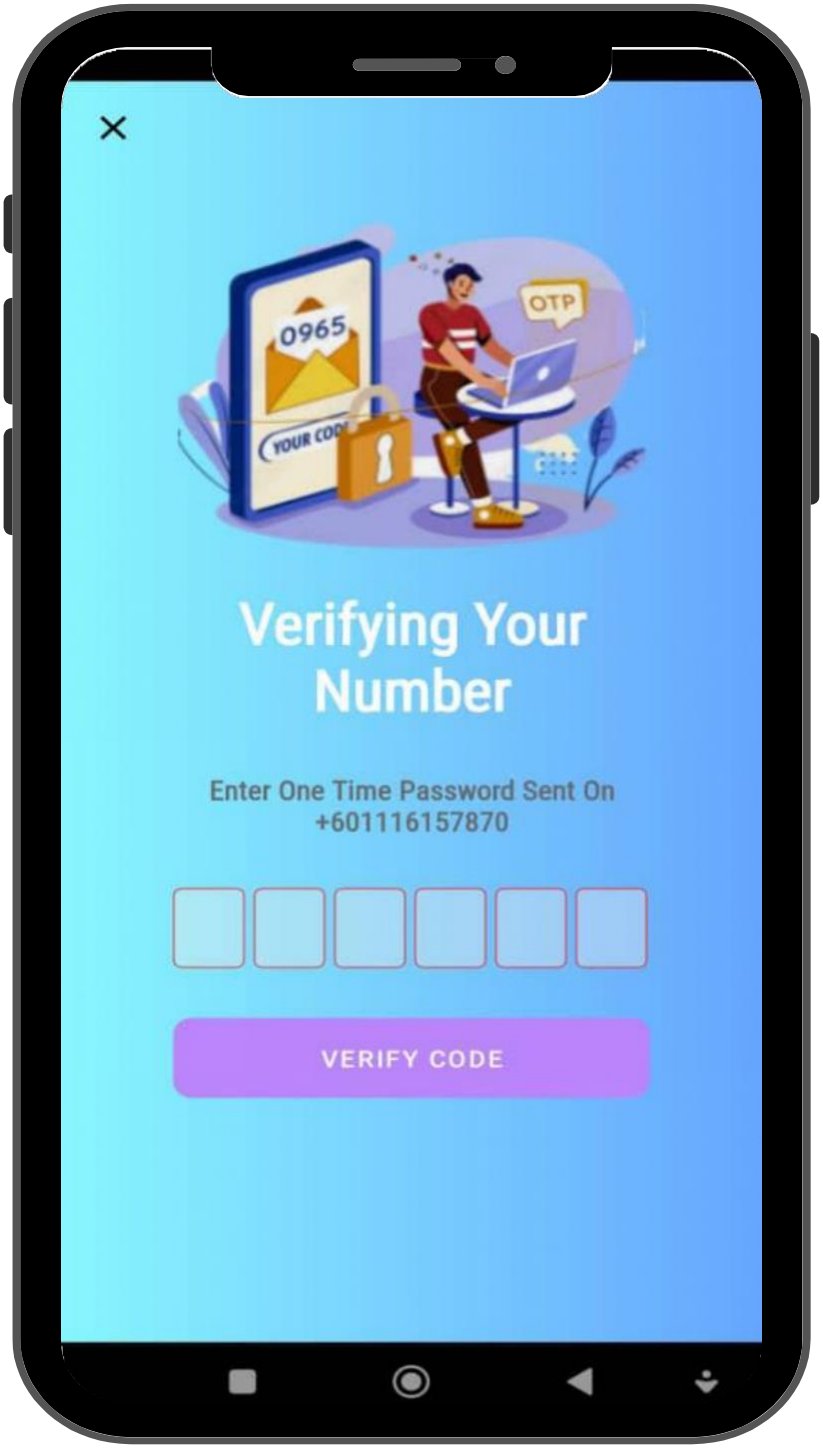

Figure 5 : OTP Page

Moreover, the journey through our sign-up process, depicted in Figures 1 through 5, encapsulates an intuitive and user-friendly experience, designed to be both simple and secure. The entire registration sequence has been meticulously crafted, striking a perfect balance between providing ease of access and maintaining robust security.

The initial step of this journey, illustrated in Figure 1, demands users to fill in pertinent details such as their full name, nickname, email address, and a secure password. Each data field has been thoughtfully incorporated, bearing in mind the significance of the user's identity and security. Upon clicking the 'Next' button, our system, armed with an advanced and efficient backend, swiftly initiates the account creation process.

Transitioning to the second sign-up page, a continuation of the process depicted in Figure 1, users are prompted to provide additional personal information - their gender and date of birth. This information, though optional, adds another layer to the user profile, making it more personalized and tailored. Navigating forward with another tap on the 'Next' button, users arrive at the final registration stage, akin to the scenario presented in Figure 2.

The journey continues to the third sign-up page, where we request users to input their phone number and select their country of residence. This information, as displayed in Figure 3, enables us to strengthen our security measures through a process known as two-factor authentication. Upon this data entry, our system dispatches a One-Time Password (OTP) to the provided phone number. This OTP serves as a verification tool, adding an extra layer of security to ensure that the account creator is indeed the rightful owner of the provided phone number. A final tap on 'Next' triggers our system to send out this OTP, thereby completing the final phase of account registration. With this, we ensure a seamless, efficient, and secure sign-up process for our users

8.5 LOGIN PAGE

Figure 1 : Login Page

8.6 DASHBOARD

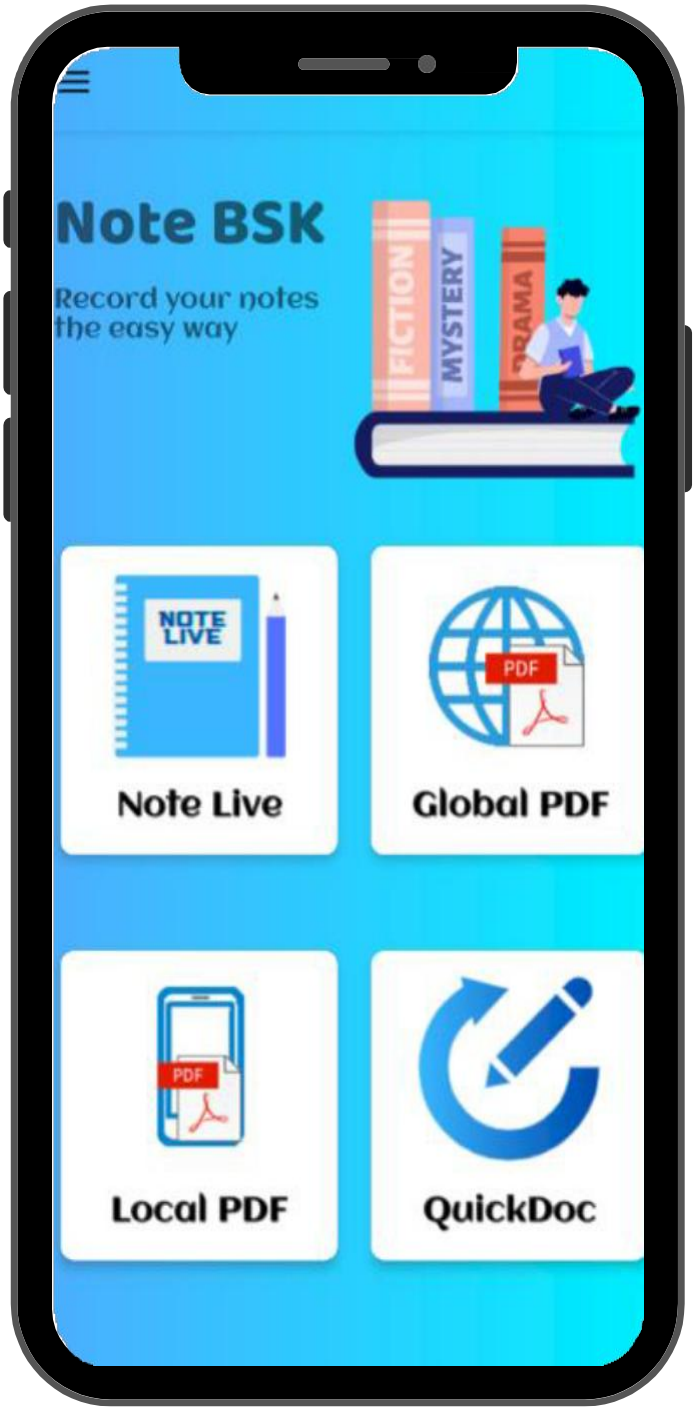

Figure 1 : Dashboard

Continuing along the user interface, we are presented with five uniquely designed buttons, each of which plays a crucial role in enhancing the user experience and overall functionality of our e-Note application. These buttons are thoughtfully incorporated into the interface to offer users an array of options to cater to their diverse needs and preferences.

Firstly, the 'Note Live' button emerges as a tool for seamless real-time note-taking. This intuitive feature, with its user-friendly design, facilitates users to swiftly jot down notes using their phone's built-in keyboard. This not only adds convenience to the process but also boosts efficiency, allowing users to capture their thoughts and ideas instantly.

Next, we have the 'Global PDF' button. This feature enables users to upload and share a PDF file with all active members within the e-Note application. It's a feature that promotes collaboration and fosters a sense of community, allowing users to exchange information and learn from each other.

Another significant feature is the 'Menu Bar' button. Upon a single tap, this button unveils a comprehensive display of all available options within the application, making it easier for users to navigate and use the application to its fullest potential.

In addition, the 'Local PDF' button is designed with a focus on personalization. This feature allows users to upload a PDF file and annotate within the uploaded file. It's a creative method of interacting with the content, allowing users to add their insights and notes directly onto the PDF.

Finally, we have the 'Quick Doc' button, an innovative addition aimed at offering a swift note-taking alternative. This button opens up a drawing tool, enabling users to make notes in a more creative and interactive manner. It gives users the freedom to express their thoughts in a way that goes beyond text, adding a touch of uniqueness to their note-taking experience.

Each of these buttons, with their individual functionalities, come together to create a cohesive and comprehensive user experience, making our e-Note application a versatile tool for all users.

8.7 NOTE LIVE

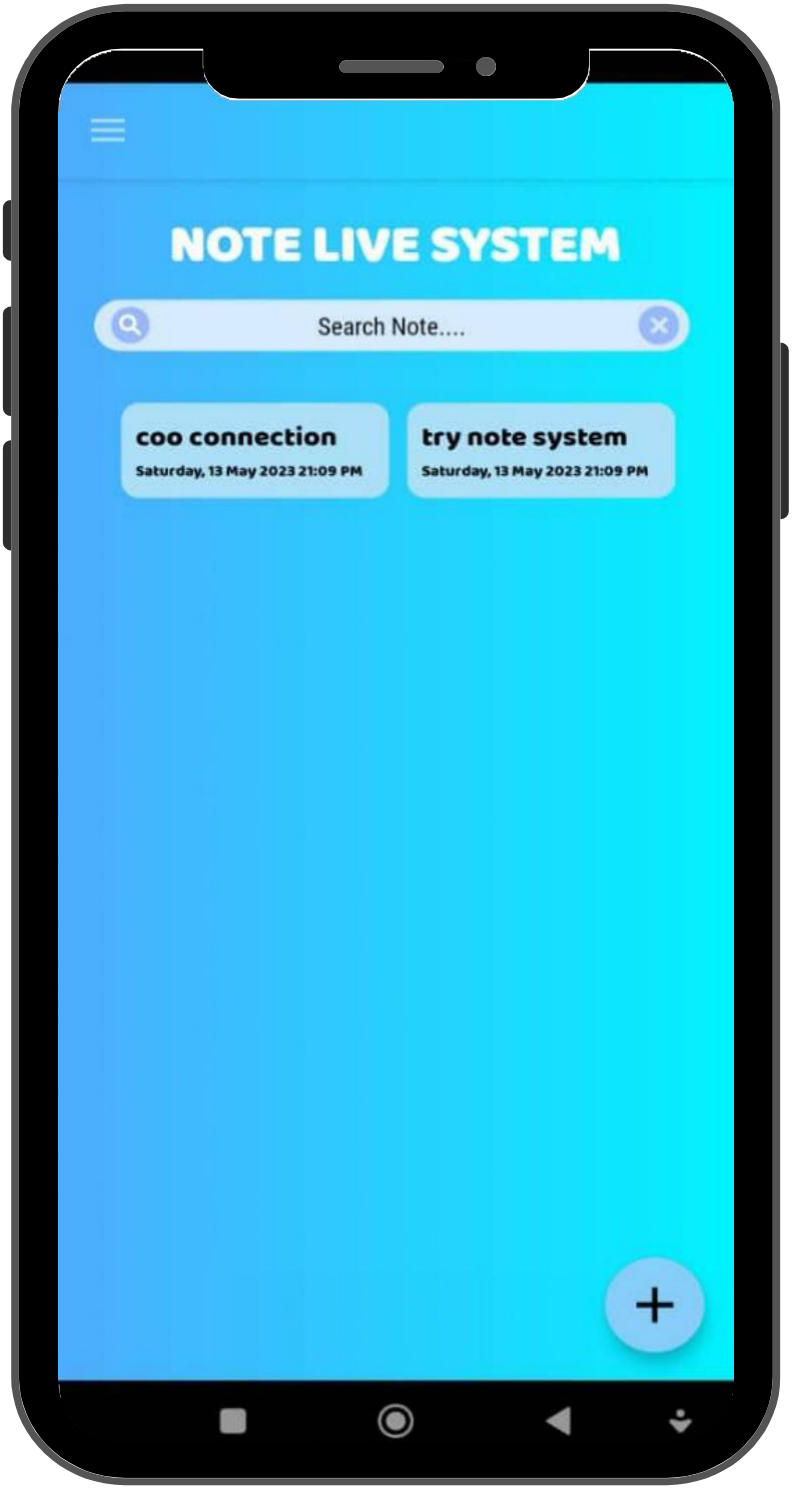

Figure 1 : Main Page Note Live

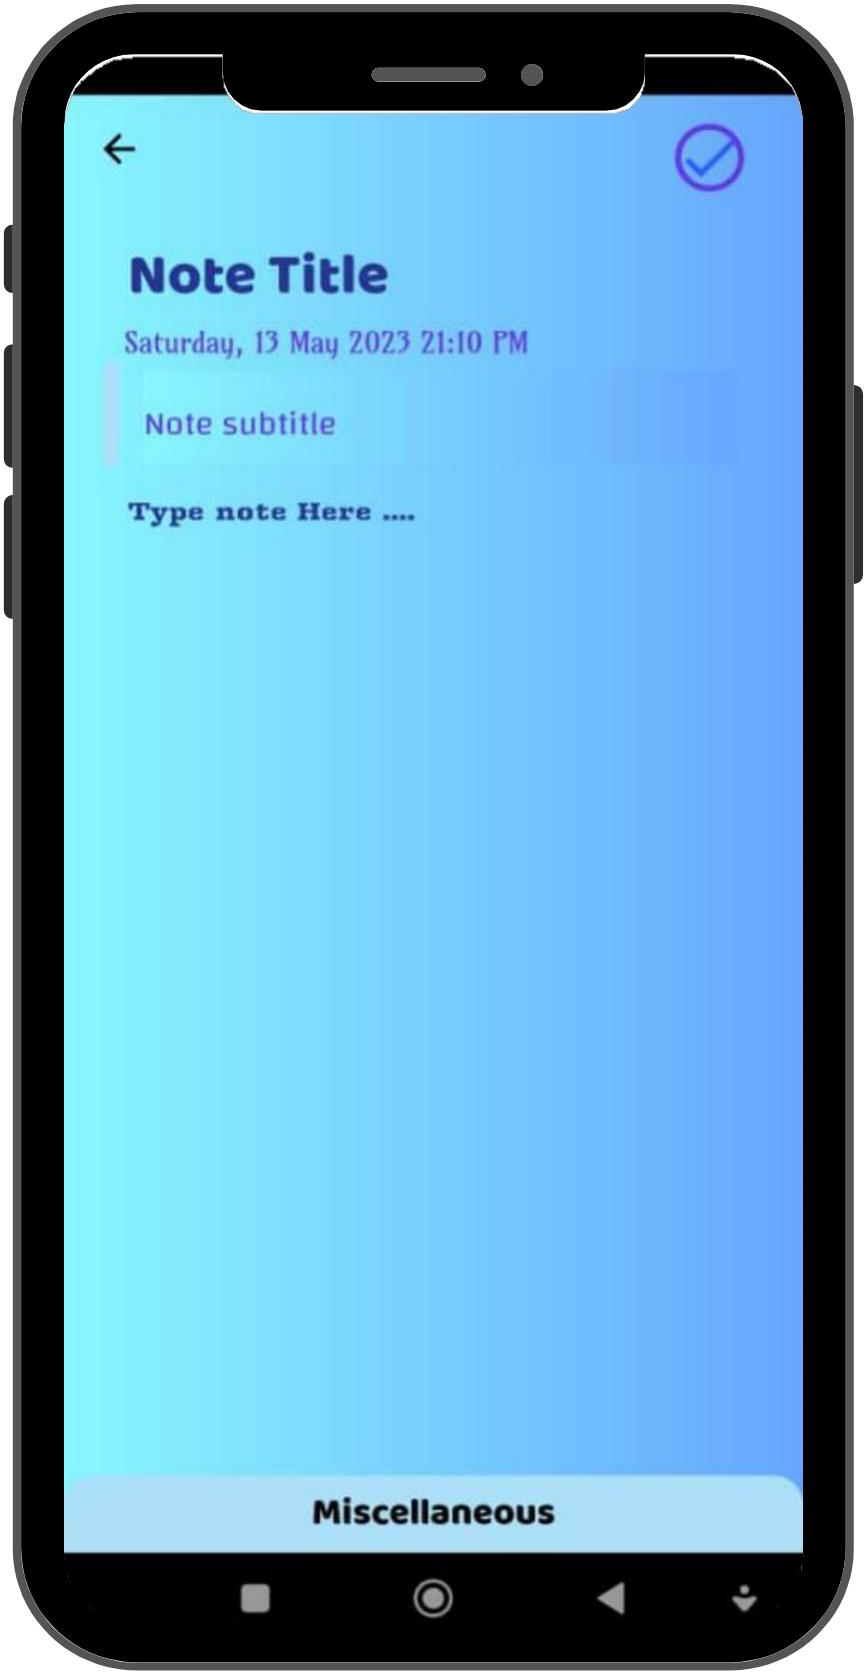

Figure 2 : Edit Note Live

Upon tapping the 'Note Live' button, users are navigated to this dedicated page. Once here, they are greeted with a convenient search bar and an 'Add' button. The search bar is designed for users to peruse through document they have crafted. Complementing this, the 'Add' button serves the purpose of creating a live note.

Post pressing the 'Add' button, users are guided to the 'Create Note Live' page. This platform allows users to effortlessly generate notes using their typing skills. They simply need to type in the allocated text box, and with a click on the 'Add' button, they are once again brought to the 'Create Note Live' page to continue their note creation process.

Additionally, a 'Miscellaneous' button is available for users to select their preferred color. A single tap on this button unfurls an array of colors: default, red, yellow, pink, and blue, giving users a spectrum of choices.

8.8 GLOBAL PDF

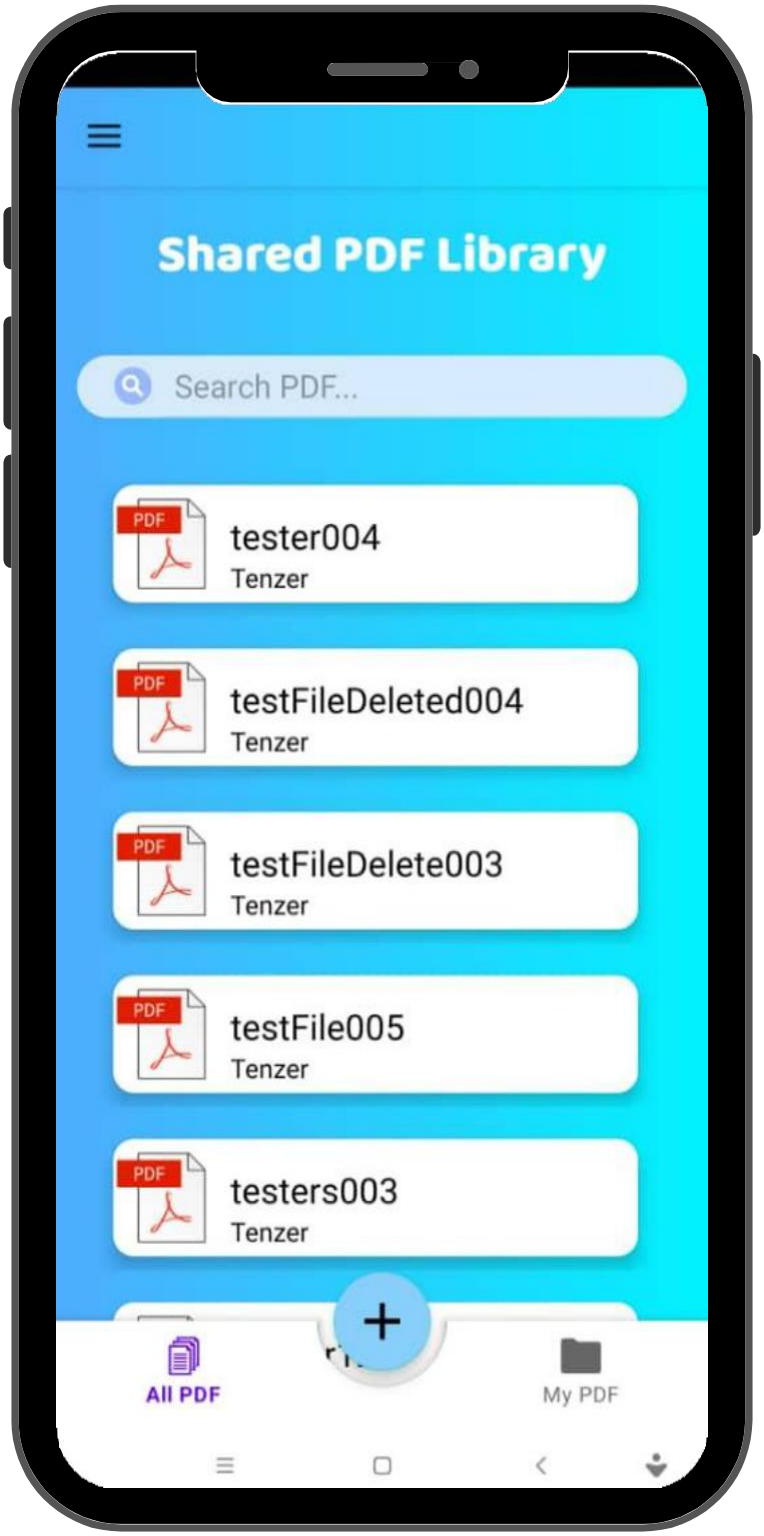

Figure 1 : Main Page Global PDF

Figure 2 : My PDF Page

Embarking on the user journey, the click of the 'Global PDF' button transports users to a unique, user-friendly interface that offers an array of robust features. Herein, users find a search bar, an 'Add' button, and two distinct features labeled 'All PDF' and 'My PDF'. The search bar, embodying a design that champions simplicity and user convenience, grants users the power to seamlessly sift through their uploaded documents, finding the required information with ease and efficiency.

The 'Add' button, in addition, stands as a beacon of assistance and convenience, providing users with the capability to upload PDF files directly from their device storage. This process is carefully streamlined to be trouble-free, reinforcing our commitment to ensuring a smooth user experience.

As users continue their journey within our e-Note application, tapping on the 'My PDF' button navigates them to a new page that mirrors the features of the previous. Here, they are greeted by the familiar sight of the search bar, 'Add' button, 'All PDF', and 'My PDF' buttons, meticulously designed to create a sense of familiarity and ease of navigation.

On this page, the functionality of the search bar is enhanced, extending its capabilities to help users locate their specific uploaded documents with even greater accuracy. The 'Add' button, consistent in its role as an enabler, continues to facilitate the direct upload of PDF files from users' local devices. This, in harmony with the search bar's added functionality, further amplifies the seamlessness of user experience, reinforcing our e-Note application's commitment to creating an environment of ease and efficiency.

8.9 LOCAL PDF

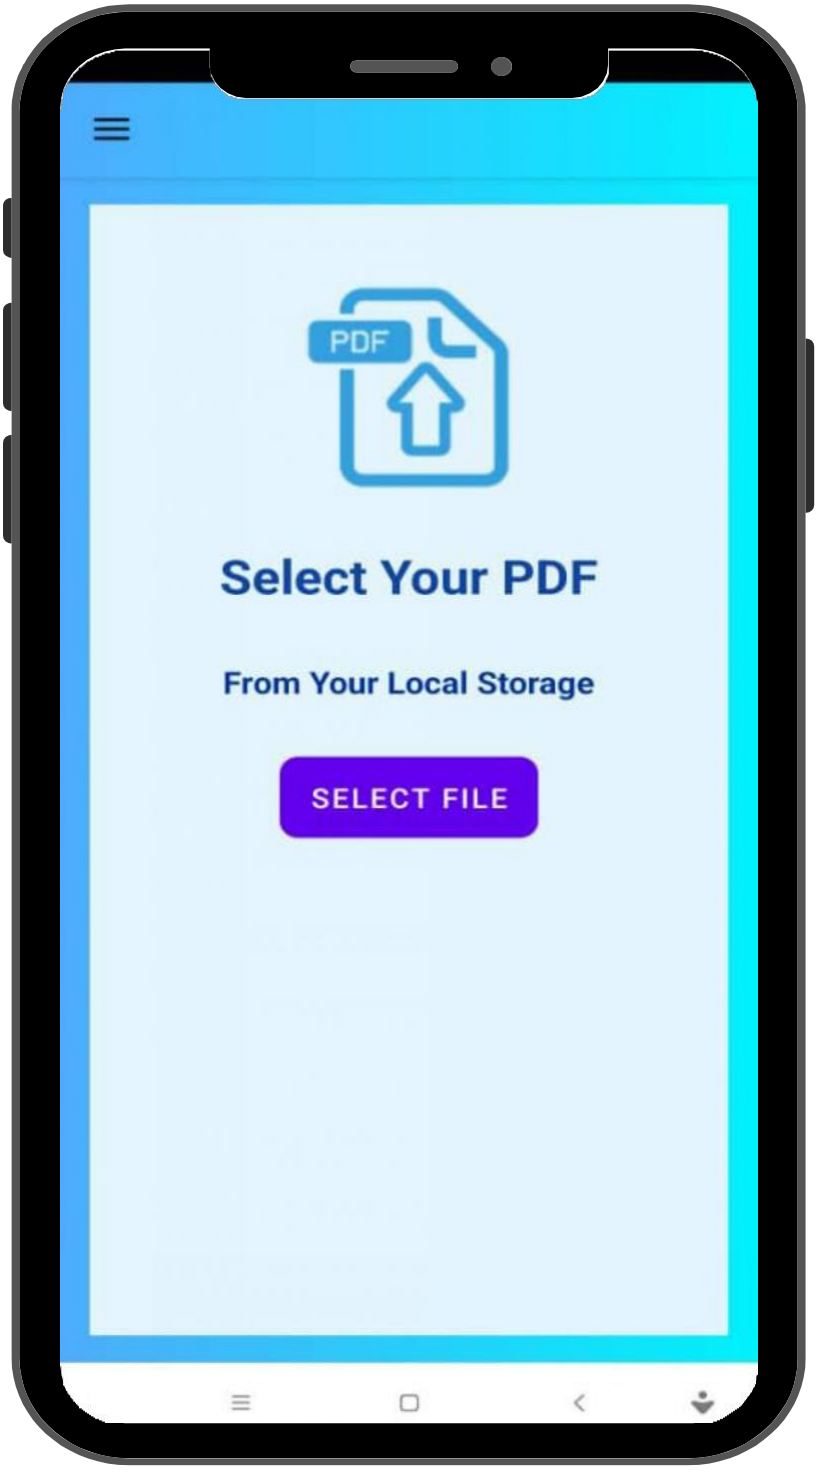

Figure 1 : Main Page Of Local PDF

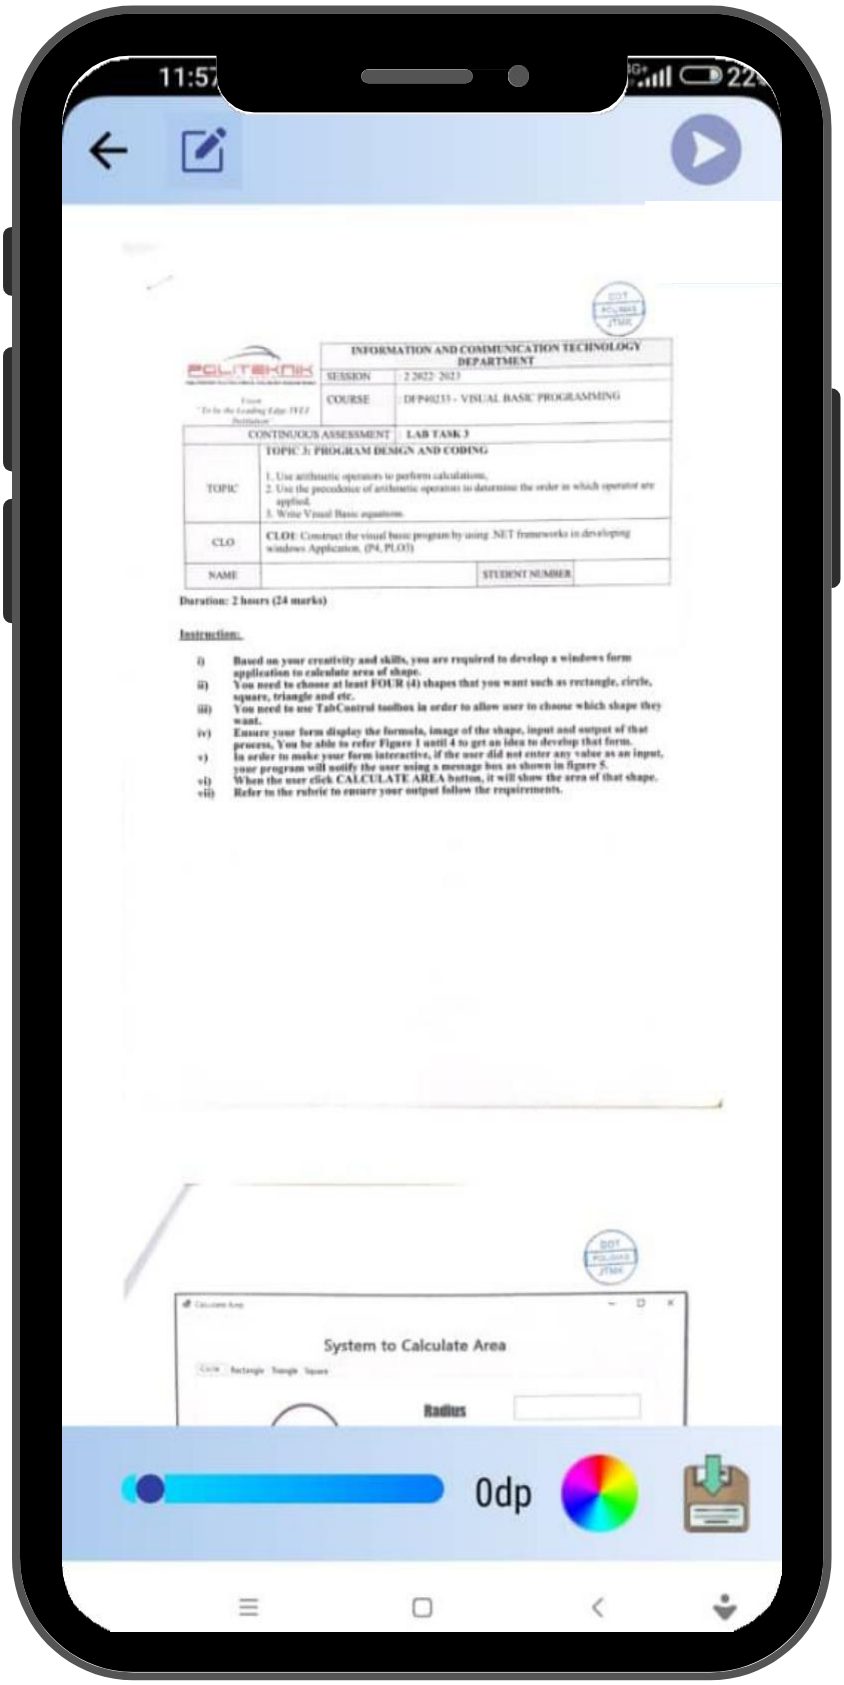

Figure 2 : Local PDF View

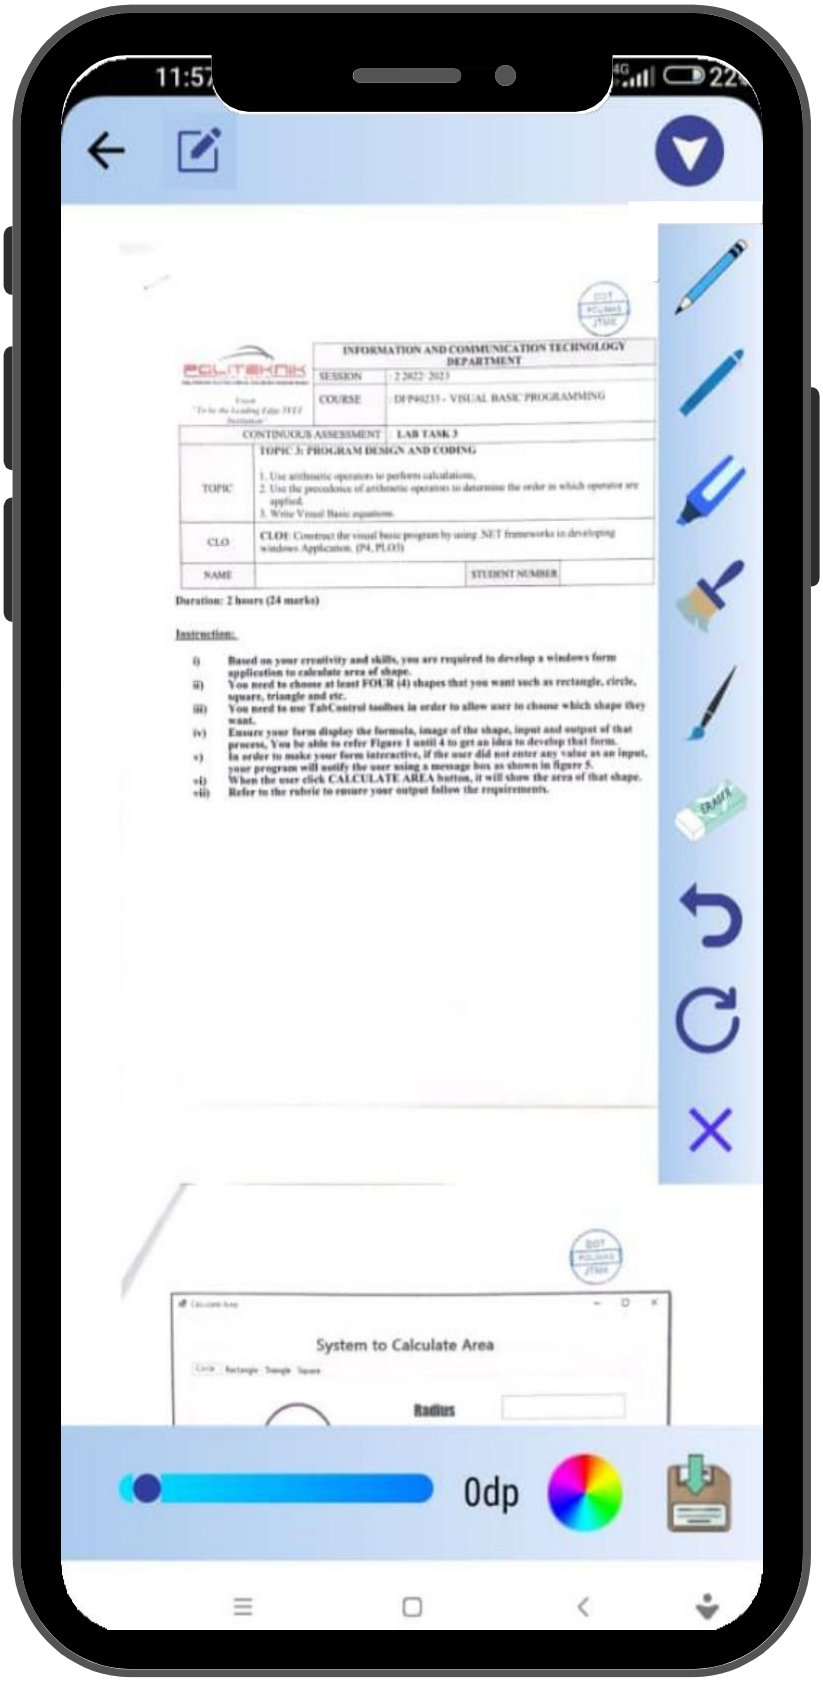

Figure 3 : Local PDF Tools

Next in line is the 'Local PDF' feature, accessed by a simple tap on the 'Local PDF' button. This action transports users to a new page dedicated to uploading files from their local storage, with the intention of creating drawings within those PDF files. To facilitate this, users are required to press the 'Select File' button which serves as a gateway for users to upload their desired files.

Once the PDF file is uploaded, users find themselves on a fresh page designed for them to unleash their creativity and draw within the uploaded PDF file. A key component of this interactive page is the 'seekbar', an intuitive tool for users to adjust the font size as per their needs, fostering an even more personalized experience.

Further enhancing the user experience, we've integrated a 'Palette Tool' button, offering users the liberty to choose their preferred color while drawing. In addition, a 'Save' button is prominently positioned, ensuring users can easily store the modified file back into their local device, preserving their efforts.

To enrich the user interaction with our platform, we have meticulously designed a host of tools available at their disposal. We believe these additions will not only enhance the user's creative process but also facilitate a smoother and more enjoyable journey as they navigate through our application.

8.10 QUICK DOC

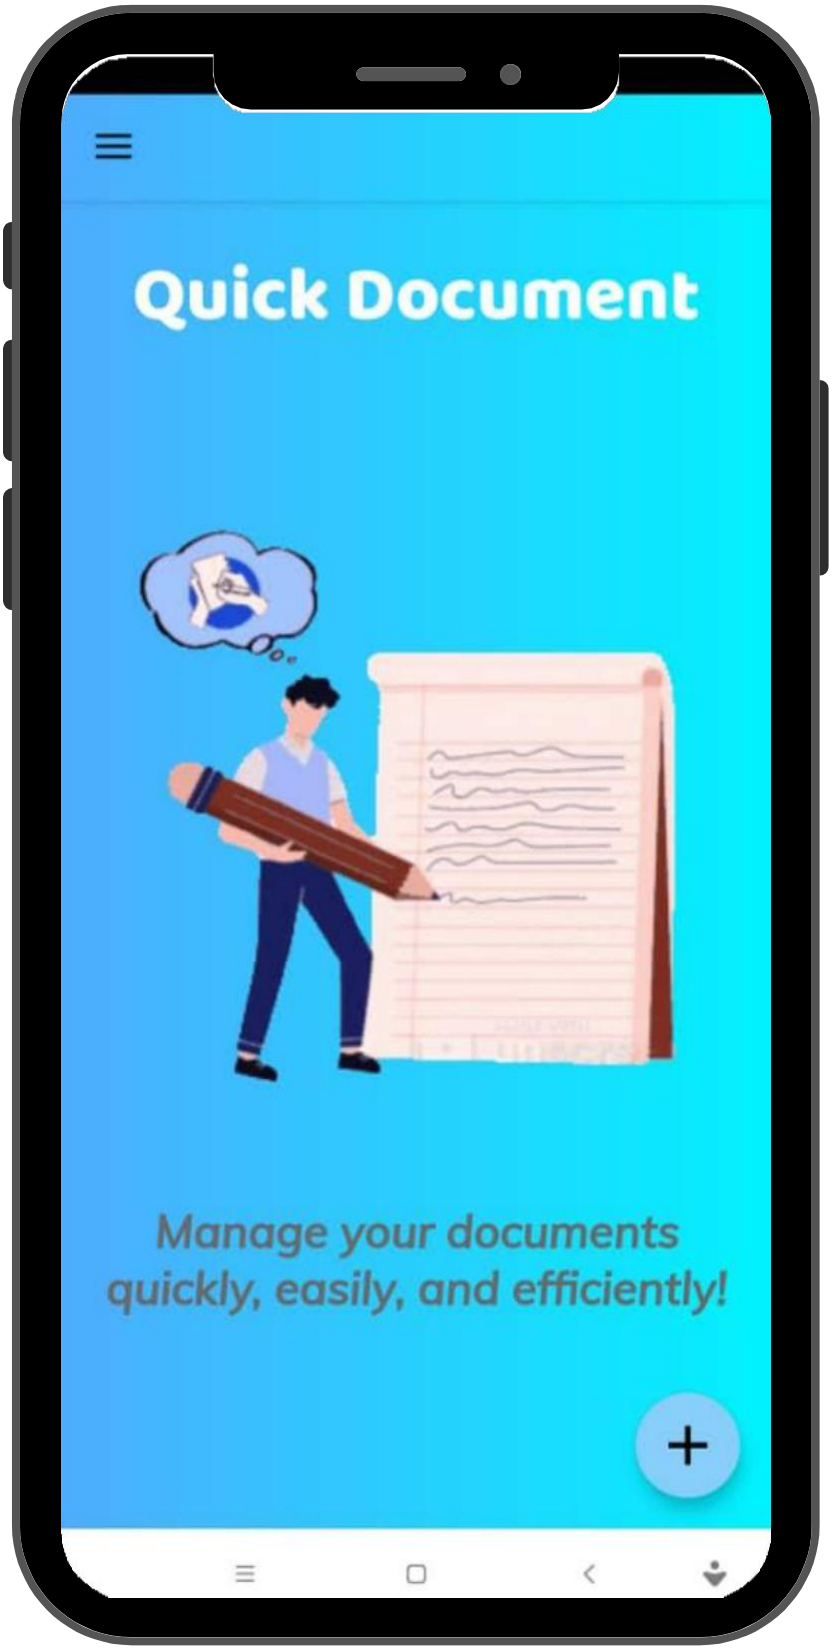

Figure 1 : Main Page Quick Doc

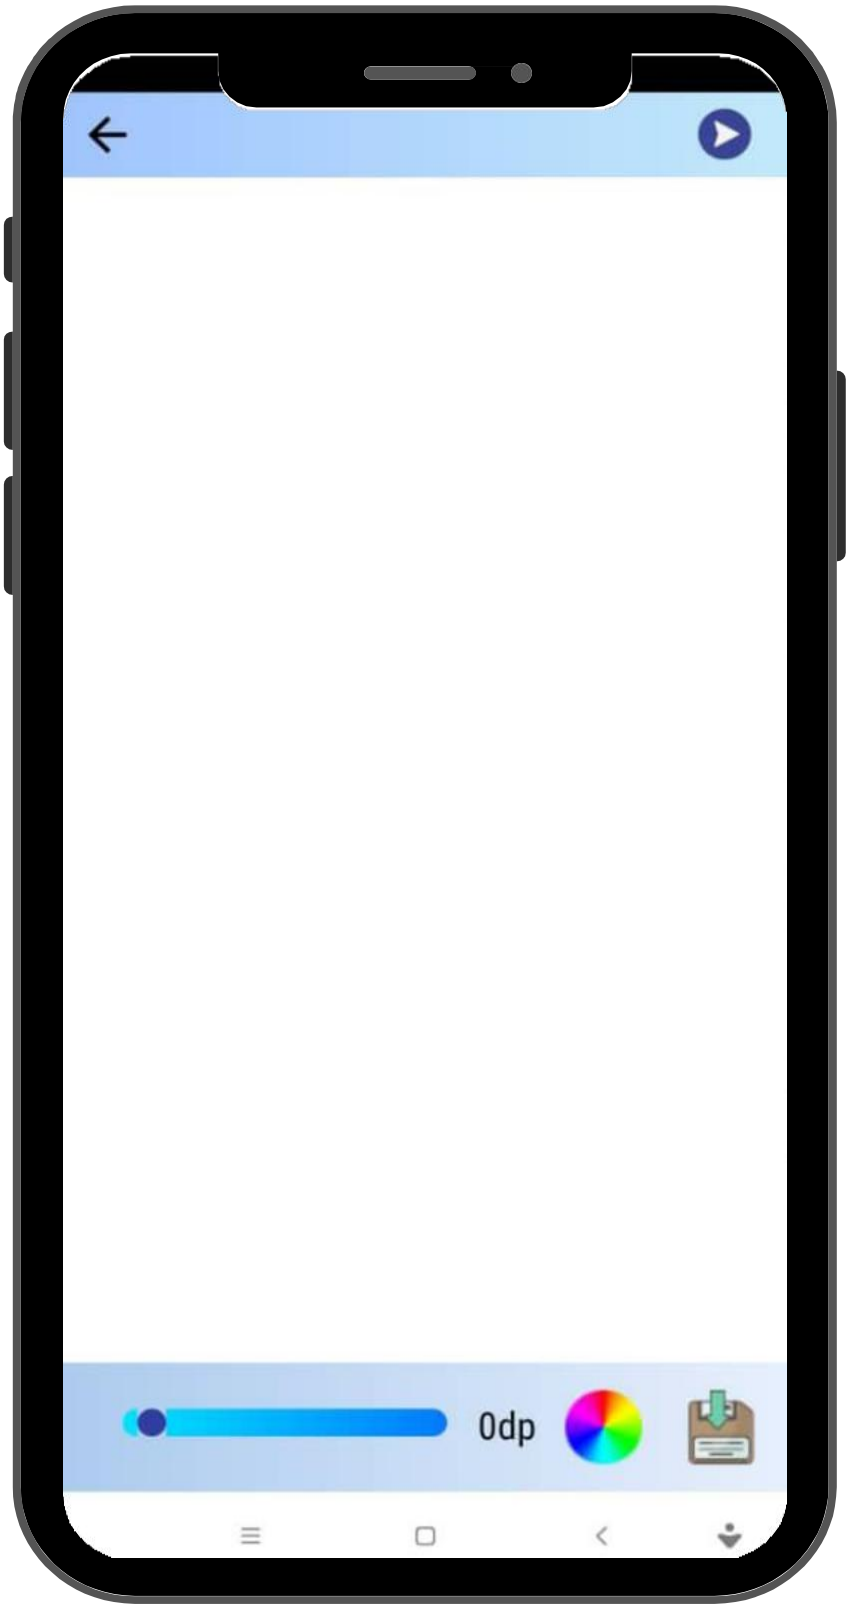

Figure 2 : Edit In Quick Doc

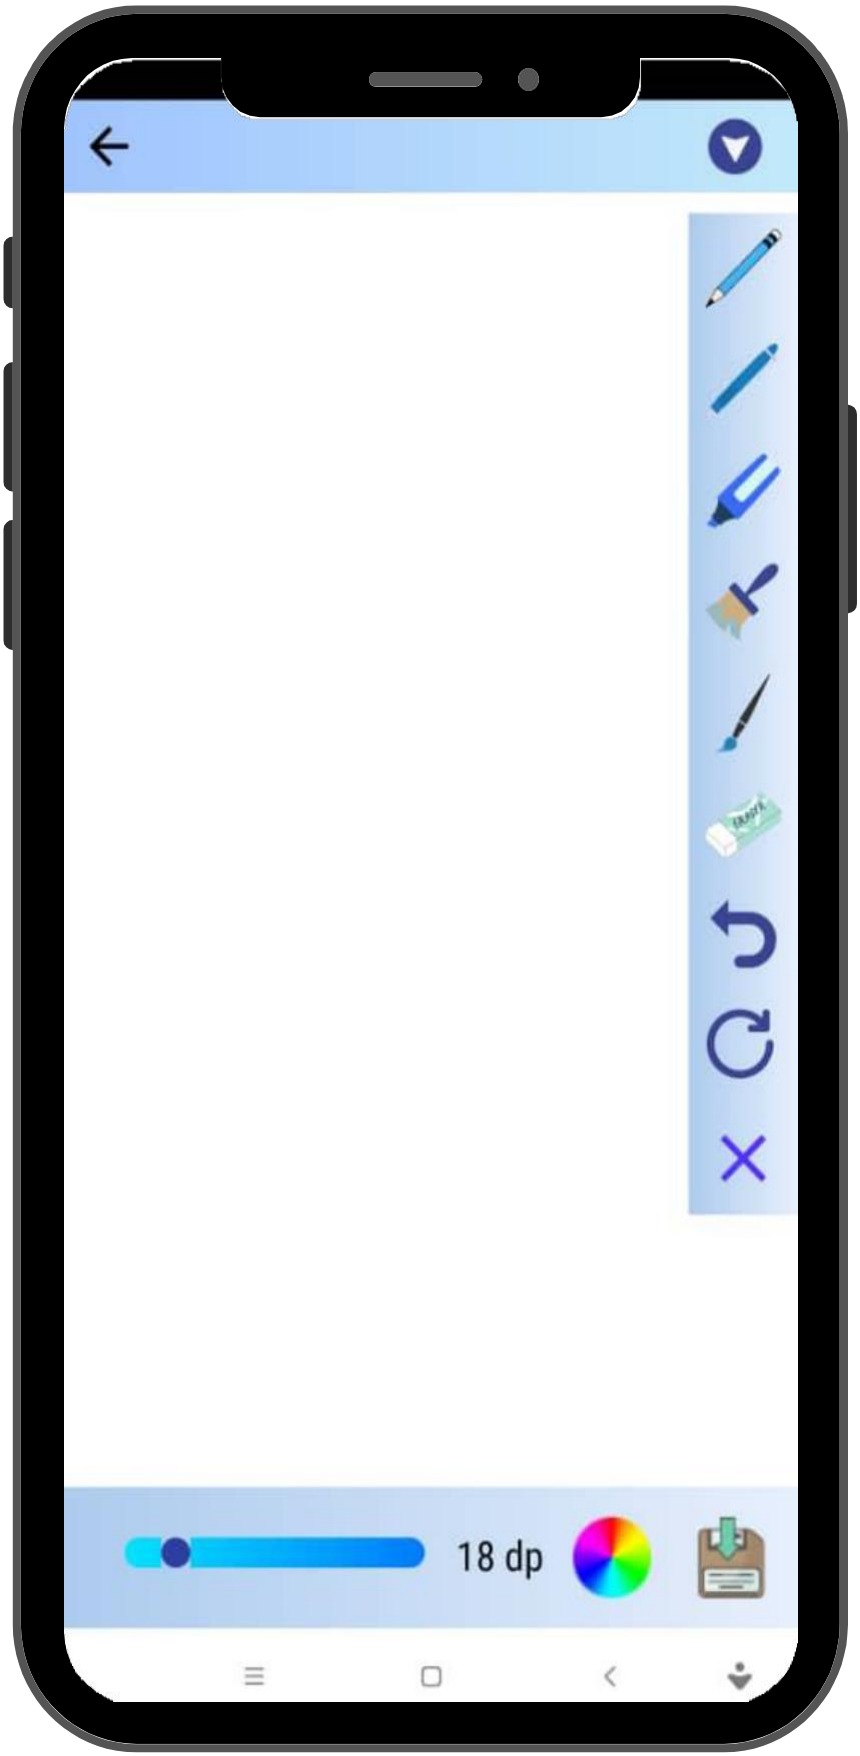

Figure 3 : Tools use in Quick Doc

Following this, the 'Quick Doc' feature invites users to rapidly generate notes through an artistic process of drawing. This is initiated by a simple click on the 'Add' button, which serves as a creative launchpad for users to draw their notes. Once the note creation process is engaged, users are navigated to a new page meticulously designed for them to let their creativity flourish.

Here, a variety of tools are strategically positioned for crafting unique notes. A key highlight among these is the 'seekbar', an adjustable slider that allows users to set the font size of their choice, adding an extra layer of personalization to their notes.

As users delve deeper into their creative process, they will discover the 'Palette Tool'. This button opens up a spectrum of colors, providing users the freedom to choose the hue that best fits their imagination.

Moreover, a 'Save' button is thoughtfully placed, empowering users to securely store their crafted notes back into their local device. This ensures that their artistic endeavors are preserved for future perusal or edits.

In the pursuit of delivering an unparalleled user experience, we offer a suite of tools dedicated to the 'Quick Doc' feature. We firmly believe these additions will not only facilitate a smooth note-making journey but also enhance the overall creative process, making it a truly enjoyable experience for our users.

8.11 MENU BAR

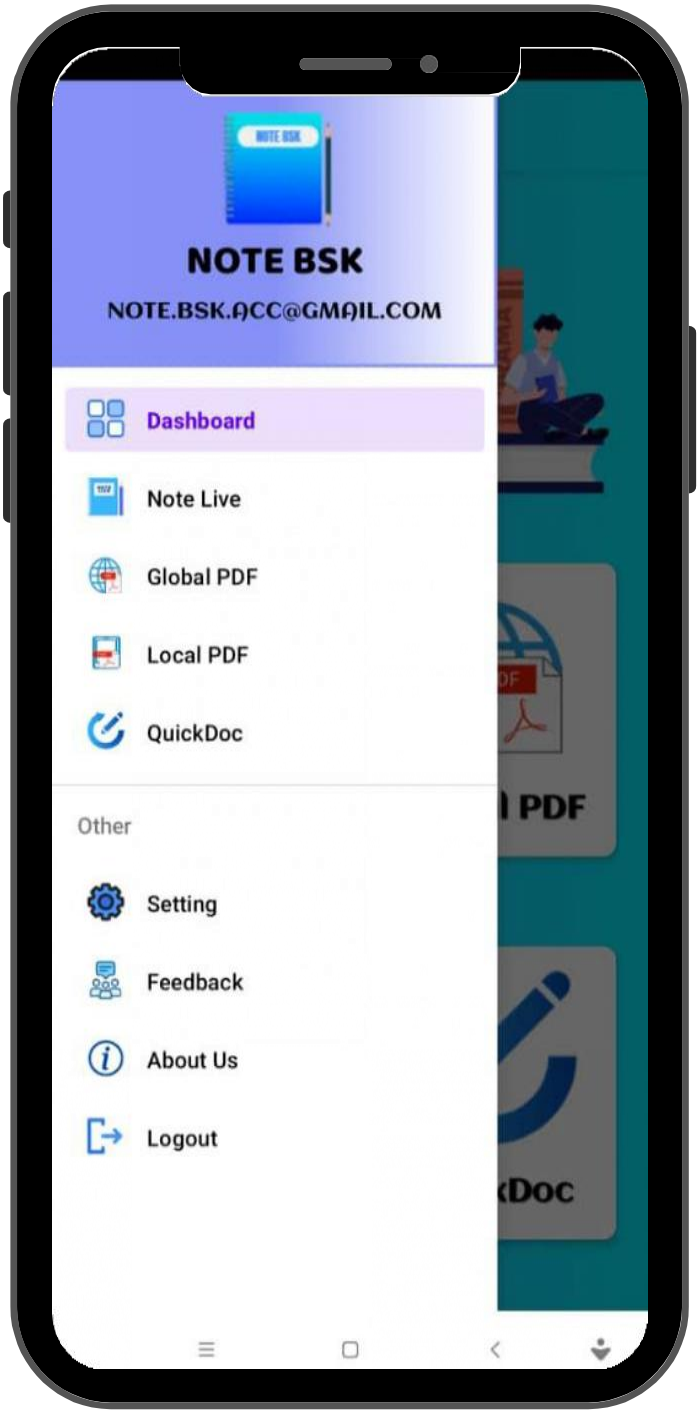

Figure 1 : Menu Bar

The next aspect of our application is the meticulously designed 'Menu Bar'. It is here that users can engage with a variety of features, each thoughtfully incorporated to provide an elevated user experience. The 'Settings' button nestled within the menu bar empowers users with the ability to personalize their backdrop and alter passwords, crafting a more tailored experience to their liking.

Further down the menu, the 'Feedback' button comes into play. It serves as a two-way communication conduit, inviting users to share their thoughts, reviews, and ratings about our application system, thereby fostering a dialogue that drives continual improvement.

In our pursuit to maintain a clear channel of communication with our users, the 'About Us' button is prominently positioned. By clicking this button, users can access our contact information, enabling them to easily reach out to us for any issues or inquiries they may have.

To round off, the 'Log Out' button stands as a secure gatekeeper. With a simple tap, users can confidently log out of their accounts, ensuring their information remains secure and private. We firmly believe that the thoughtful integration of these features within the menu bar not only enhances the overall user experience but also supports a seamless navigation journey through our application.

8.12 FEEDBACK

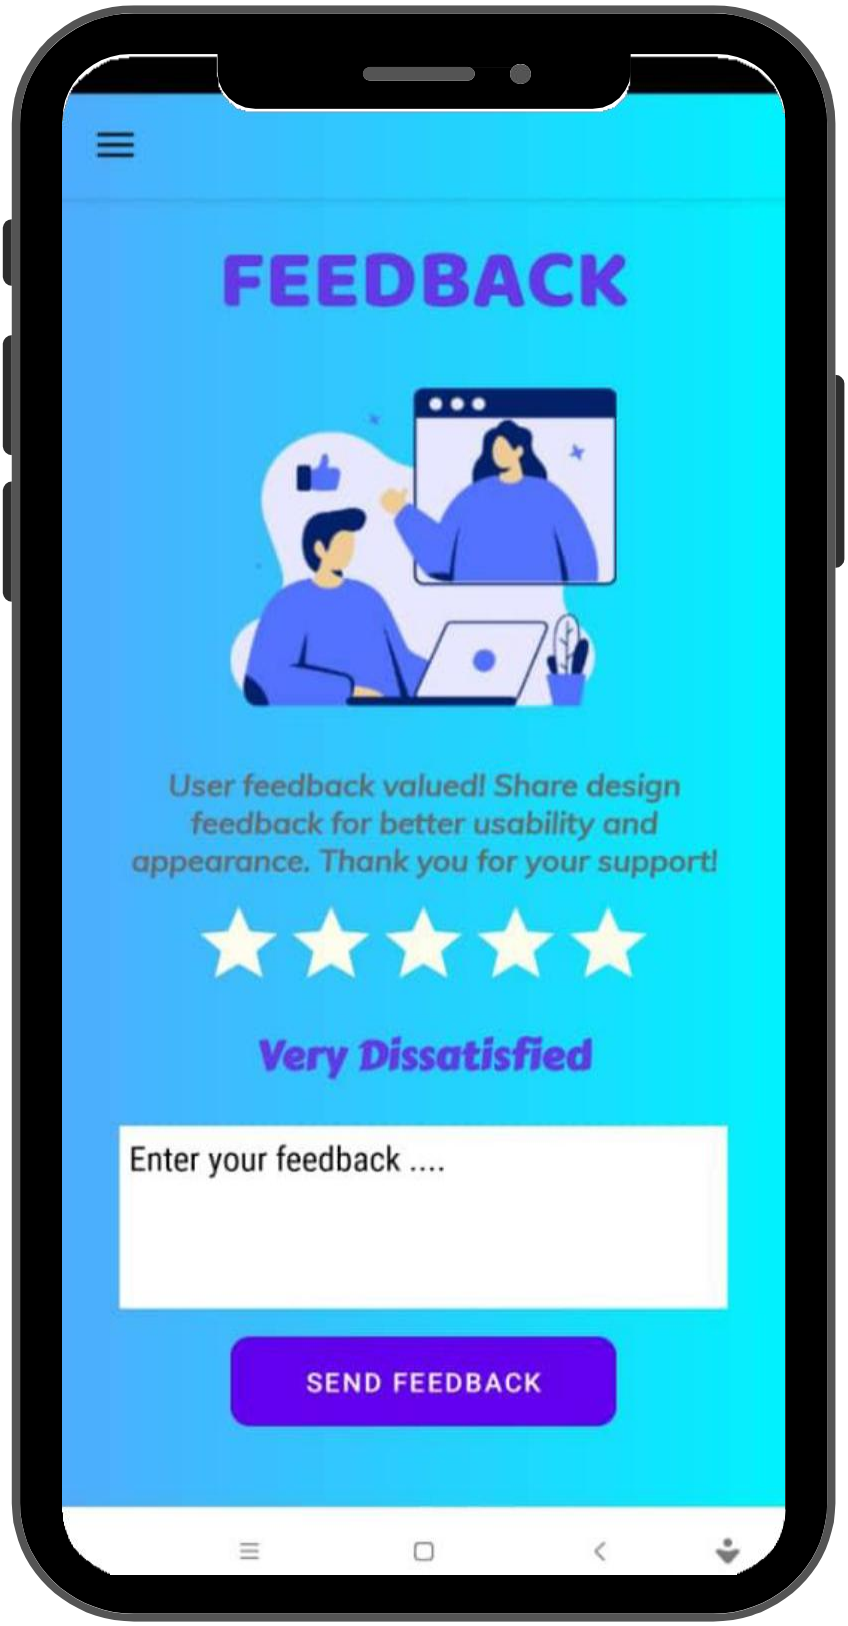

Figure 1 : Feedback

The next noteworthy feature is our comprehensive 'Feedback' section. This interface is purposefully designed to foster an open dialogue between our application and its users. The 'Rating Bar' is a key component of this section, enabling users to quantitatively express their satisfaction or dissatisfaction with our system, thus providing us valuable insights to continually improve our service.

Furthermore, we've incorporated a 'Feedback Text Box'. This space empowers users to jot down their thoughts, ideas, concerns, or suggestions about our app system in a more qualitative and descriptive manner. This allows us to gain a more in-depth understanding of our users' experiences and expectations.

Completing the feedback mechanism is the 'Send Feedback' button. By clicking this button, users can directly forward their feedback to our administrative email. This streamlined process ensures that every piece of feedback received is accounted for, enabling us to act upon it promptly.

We firmly believe that this interactive feedback system not only bolsters our connection with our users but also plays a crucial role in driving the continual evolution and improvement of our application, ultimately leading to a more satisfying user experience.

8.13 ABOUT US

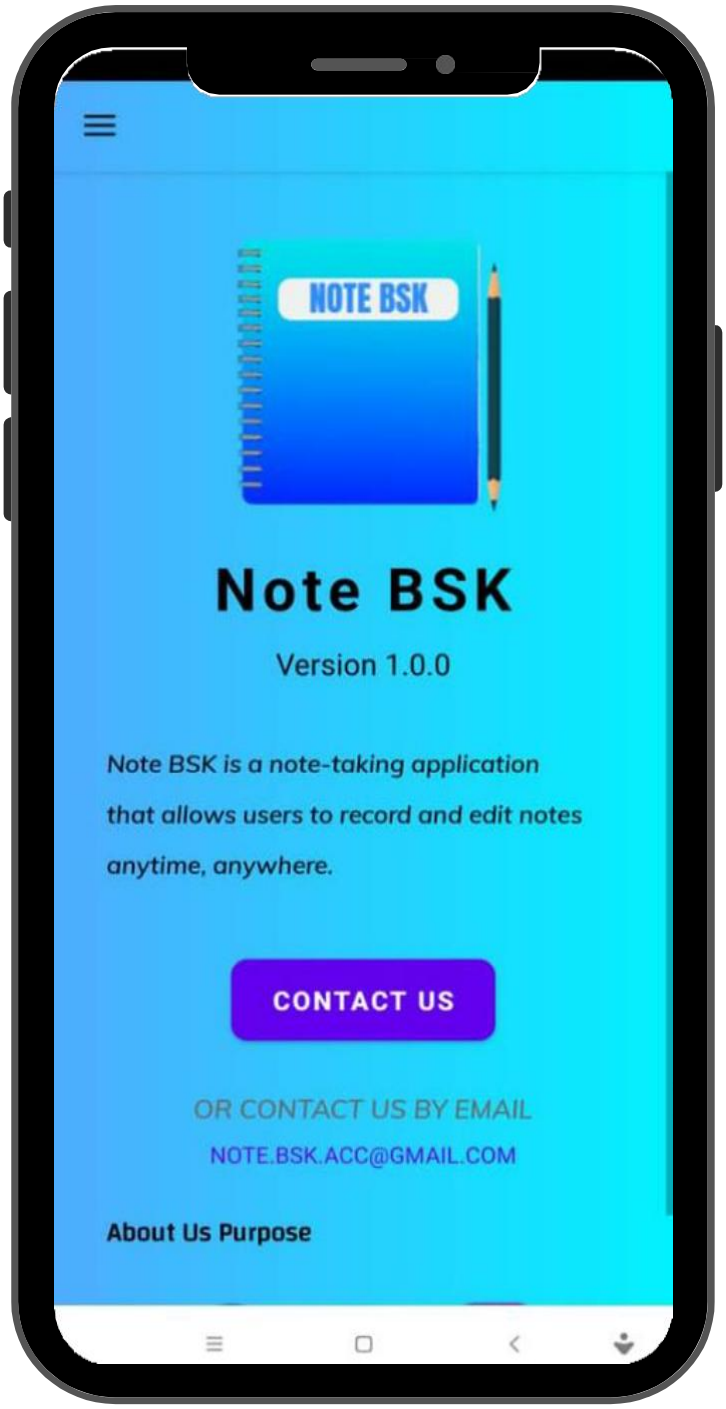

Figure 1 : About Us

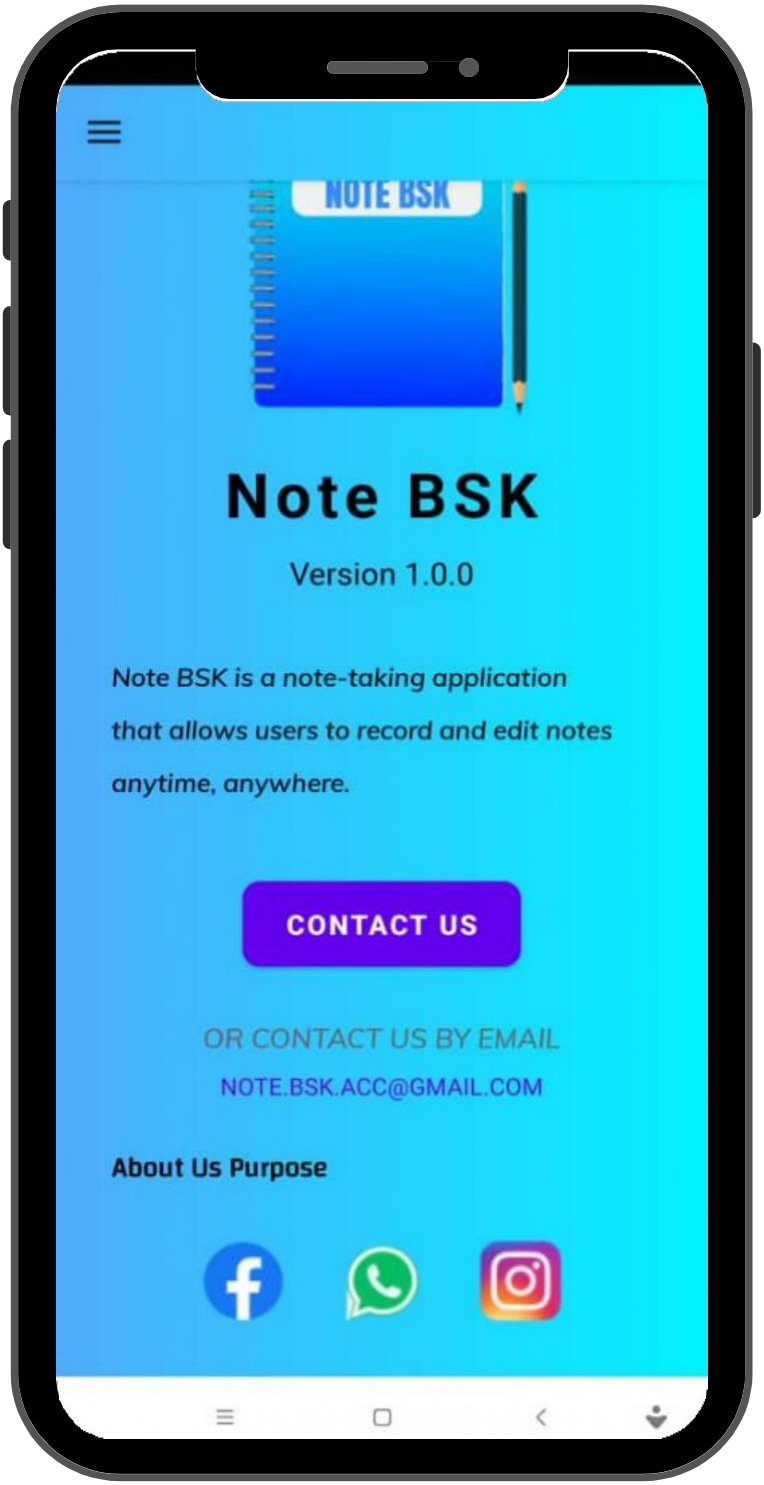

Figure 2 : About Us

On our 'About Us' page, we have meticulously curated information to foster a deeper connection with our users. This page introduces the current version of our E - Notes Mobile Appapplication, thus keeping users abreast of our constant innovation and evolution. Moreover, it provides a succinct yet comprehensive overview of our application, highlighting its unique features, value proposition, and the profound impact it aims to create.

One standout feature we take pride in is our 'Contact Us' button, a vital cornerstone in our application's interactive structure. This button serves as a direct communication lifeline, enabling users to seamlessly connect with our administrative team to address any account-related queries or concerns. The mere tap of a button places our users in touch with our administrative personnel, signifying our unwavering commitment to provide instantaneous assistance when needed.

Moving beyond the confines of conventional communication, we have introduced an option for users to reach out to us via email. This method offers users the luxury of detailing their doubts or queries at their own pace, thereby ensuring our team can respond in the most accurate and comprehensive manner.

Another salient facet of our application is the 'About Us' section. This feature, beyond providing critical information about our organization, guides users to our official webpage with a simple tap. This extension opens a broader horizon of insights into our mission, values, and services, thereby nurturing a more transparent relationship with our users.

We firmly believe that these functions work synergistically to build a robust support system, making our application user-friendly and promptly responsive. By focusing on these elements, we aim to elevate the overall user satisfaction, and consequently, their trust in our services. This ethos reflects our commitment to creating an application that not just fulfills users' requirements but also surpasses their expectations by continually adapting, improving, and innovating.

8.14 SETTING

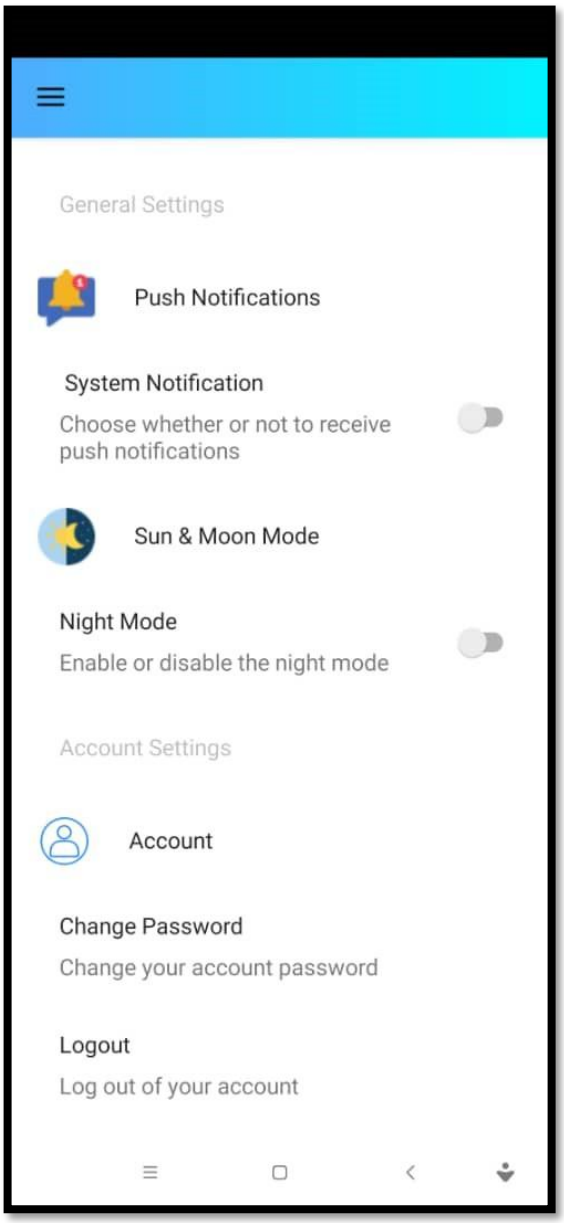

Figure 1 : Setting

In our relentless quest to enhance user experience, we have incorporated a 'Night Mode' setting in our e-Note application. This setting, designed to mitigate eye strain and facilitate a comfortable reading environment, offers users the option to switch the application's interface to a dark theme. Upon clicking the corresponding button, the vibrant hues of the application seamlessly transition into a soothing black palette, creating an ambiance that is conducive for night-time usage or low-light environments. This not only showcases our commitment to user comfort but also underlines the application's flexibility in catering to different user preferences.

Next, we have the 'Change Password' feature. Understanding that data security is of paramount importance, we have made password modification a simple and swift process in our application. By clicking the 'Change Password' button, users can effortlessly initiate the password changing procedure, reinforcing their account's security as per their needs. This seamless mechanism encourages users to update their passwords regularly, thereby promoting safer usage habits and enhancing the overall security of their data.

Lastly, our application hosts a 'Logout' button, ensuring a smooth and secure exit whenever users wish to end their session. With just a tap on this button, users can confidently logout from their accounts, safe in the knowledge that their information remains secure. This process underscores the application's commitment to providing users full control over their account's accessibility and reaffirms our commitment to user privacy and data protection.

In essence, each of these features - 'Night Mode', 'Change Password', and 'Logout' - cater to diverse aspects of user experience. From personalized reading environments to secure data management and access control, we continuously strive to facilitate a comprehensive, secure, and personalized experience for all our e-Note users.

8.15 LOGOUT FUNCTION

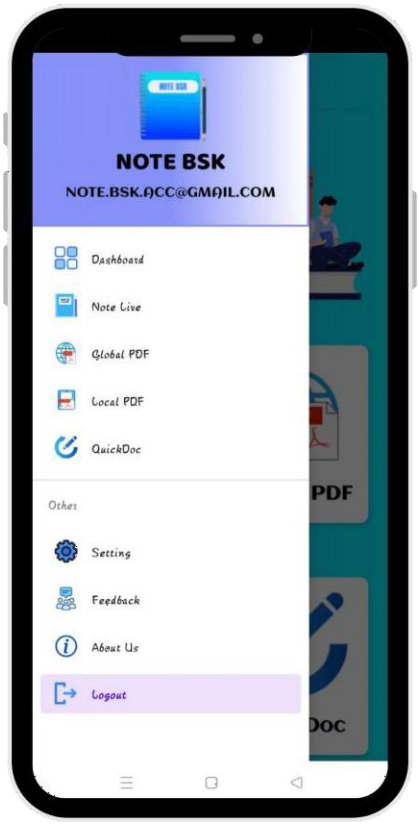

Figure 1 : Logout Function

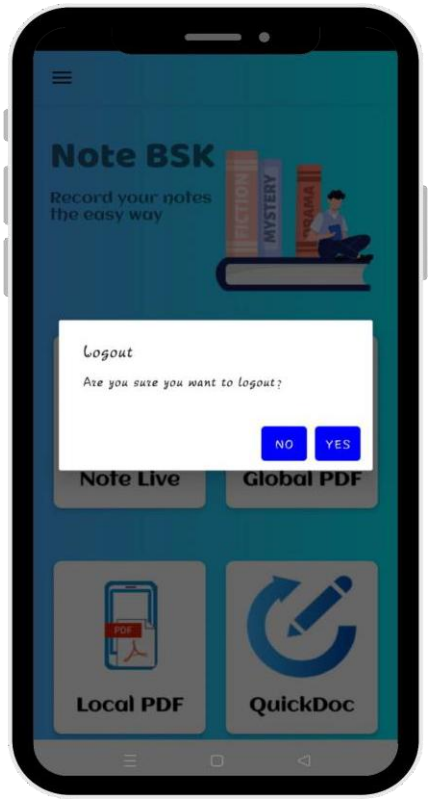

Figure 2 : Logout Function

When a user chooses the 'Logout' option within the nuanced architecture of our application's drawer navigation, a thoughtfully designed interaction occurs. As if gently confirming their intent, a dialogue box is manifested, subtly inquiring if the user wishes to depart from the realm of the application.

This interaction is meticulously designed to respect the user's agency while also ensuring their decisions are intentional. The dialogue box is not merely a conduit of confirmation, but it embodies our application's commitment to creating a respectful user-experience. It echoes the sentiment that every action within our application is under the user's control, reinforcing their autonomy and freedom of choice within our digital space.

This dialogue box, in its simplicity and precision, serves as the final interaction point within the application, encapsulating the user's journey from beginning to end. It stands as a testament to the fluidity and grace with which our application engages its users, allowing them to exit the application in a manner that is as elegant and intuitive as their entry.

Moreover, this carefully crafted query carries an undercurrent of our concern for the user's experience. The prompt that appears, requesting the user's confirmation for their desire to log out, is a reflection of our thoughtful design approach. It ensures the user's actions are deliberate and averts unintentional exits which might disrupt their engagement with the application.

In essence, the 'Logout' interaction encapsulates our commitment to deliver an unparalleled user experience, marked by respect for user's decisions, mindful design, and smooth transitions. It stands as a reminder that even as they choose to exit, users remain at the heart of our design and innovation process, their needs and satisfaction being our foremost priority.

8.16 FORGET PASSWORD FUNCTION

Figure 1 : Login Page

Figure 2 : Forget Password Page

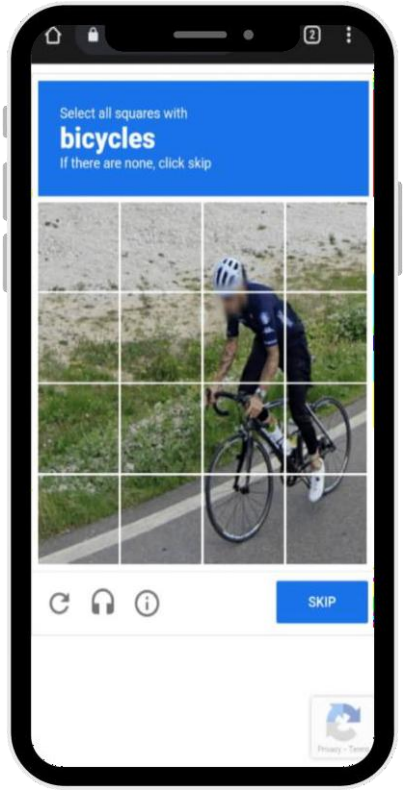

Figure 3 : Secure of Forget Password

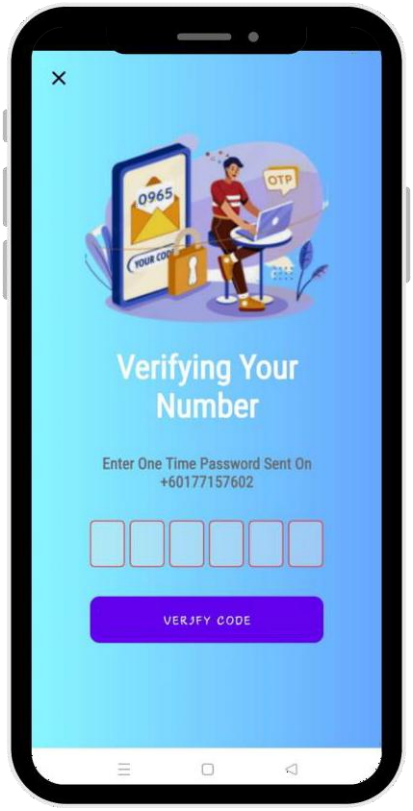

Figure 4 : OTP Page

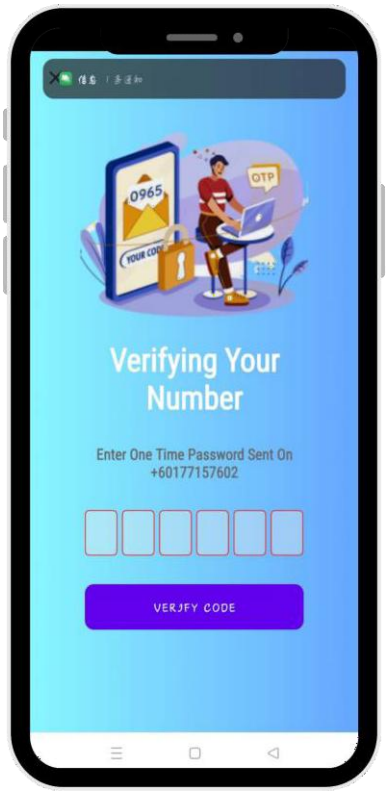

Figure 5: OTP for Phone Alerts

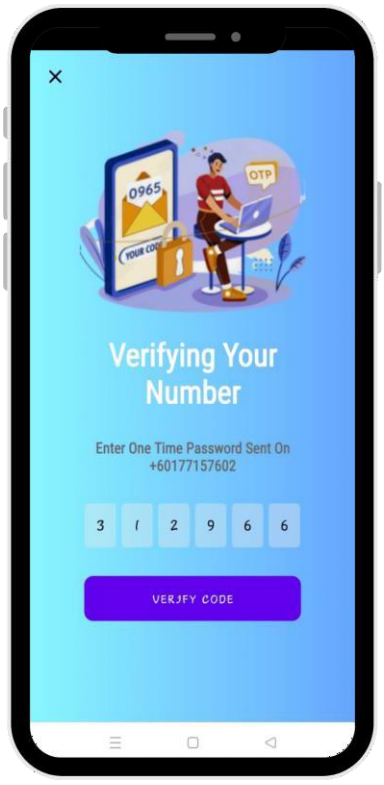

Figure 6 : Enter OTP for Phone Alerts

Figure 7 : Reset Password Page

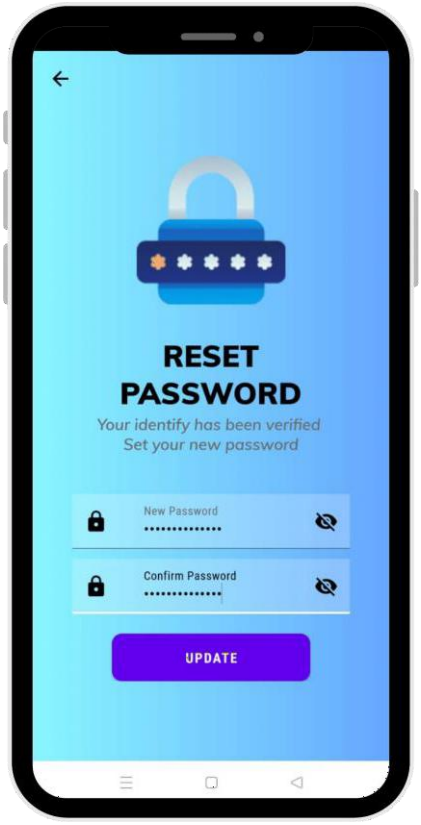

Figure 8 : Enter New Password

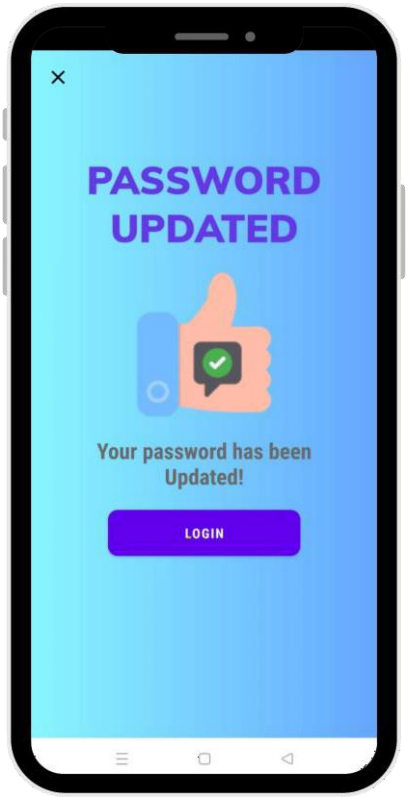

Figure 9 : Password Update Success

Figure 10 : Back to Login Page

Imagine a user who finds themselves on the 'Login Page' (Figure 1) but unfortunately, they've forgotten their password. However, there's no need to worry. The user can swiftly redirect their attention to the bottom right corner of the screen, where they'll find the lifeline they need: the 'Forget Password' option. By clicking on this, they're instantly guided to the 'Forget Password Page' (Figure 2).

On this page, a simple interface greets the user, asking them to key in their phone number. With a quick tap of the 'Next' button, the user initiates the password recovery process. This action leads the user into the secured confines of the 'Secure of Forget Password' page (Figure 3). A captcha, in the form of robot verification imagery, appears, offering an extra layer of security to ensure that the user is not a bot.

Upon successful captcha verification, the journey continues to the 'OTP Page' (Figure 4). This is a critical juncture in the password recovery journey. The user's phone buzzes with an alert, mirroring what's shown in Figure 5. An 'OTP for Phone Alerts' has arrived. With the unique OTP in hand, the user follows the path illustrated in Figure 6, typing the OTP into the designated input field.

Upon validating the entered OTP by clicking the 'Verify Code' button, the user is catapulted into the 'Reset Password Page' (Figure 7). Here, the user has the opportunity, as demonstrated in Figure 8, to define a new password, the key to their account. They can choose a strong and unique password, enhancing the security of their account.

Successfully setting a new password leads to a moment of triumph. The 'Password Update Success Page' (Figure 9) appears, signifying that the mission of password recovery has been accomplished. However, the journey doesn't end here. With one final click on the 'Login' button, the user is smoothly transported back to the starting point, the 'Login Page' (Figure 10). This marks the successful completion of the password reset journey and the user is now ready to access their account with their newly minted password.

8.17 REMEMBER ME FUNCTION

Figure 1 : Remember Me Function

Imagine a user navigating the 'Login Page' just like in Figure 1. Nestled at the lower left corner of the screen is a little checkbox marked 'Remember Me'. This seemingly inconspicuous feature holds a considerable convenience for the user. With a swift click, the user activates a powerful function that retains their phone number and password information.

This action means that even if they exit the E - Notes Mobile App, their login details remain safely stored within the system. The next time they launch the application, the 'Login Page' greets them, already filled with their phone number and password, ready to welcome them back into the E - Notes Mobile App application.

This feature is not only a simple convenience; it is also a safety net of sorts. It serves as a guard against those occasional moments of forgetfulness where passwords slip out of

memory. Thanks to the 'Remember Me' function, users won't have to wander through the 'Forget Password' route frequently.

By remembering their credentials, this feature provides a smooth and efficient way for users to return to their application without the need for retyping their login information. This efficient access optimizes their user experience, saving them precious time and keeping the path into the E - Notes Mobile App clear and user-friendly. It is an elegant solution to a common problem, bridging the gap between user convenience and efficient access.

12.0 CONCLUSION

In conclusion, let us take a moment to recap the ground we've covered with our groundbreaking e-Note application and look ahead to the exciting path that lies before us. This innovative tool we've created stands as a beacon in the realm of digital note-taking, offering users a streamlined platform to effortlessly open, navigate, and annotate PDF files. This synergy of textual content and personalized insight forms the bedrock of our application, facilitating an environment conducive for the creation, modification, and storage of notes. As a testament to its user-centric design, the app has been sculpted with intuitive navigational controls and easy-to-use interfaces, ensuring a smooth user journey.

Beyond its fundamental note-taking capabilities, the e-Note application broadens the user experience horizon by integrating a robust set of editing tools. This arsenal of tools has been meticulously curated to foster effortless modification of notes. From simple textual amendments to intricate format changes, users can tailor their notes to reflect their evolving thoughts, ideas, and understandings. By instilling this element of adaptability into the app, we empower users to make their notes dynamic, allowing for constant evolution and growth.

The foresight of user needs led us to incorporate an additional feature - the download function. We understand the importance of preserving hard work and intellect, and this feature stands as a safeguard against unintentional loss of notes due to mishaps or system errors. By facilitating local storage of these vital pieces of information, users can rest assured that their insights and knowledge, captured meticulously in the form of notes, are well-preserved for future reference.

One of the unique selling points of our e-Note application is the capability to facilitate note sharing. This advanced feature adds a new dimension of collaboration, communication, and knowledge exchange. It acknowledges the strength of collective wisdom and cultivates an environment where users can learn from each other, share unique perspectives, and contribute to a shared pool of knowledge.

To summarize, the e-Note application is not just a tool—it's a revolution in the way users interact with PDF files. By consolidating the processes of note-taking, editing, sharing, and storing, we pave the way for a more holistic and fulfilling user experience. Users are offered the luxury of time efficiency, the security of knowledge preservation, and the joy of learning from shared notes. This is our commitment to fostering a culture of knowledge-sharing that transcends traditional boundaries and inspires a new era of collective learning and intellectual growth. With our eyes set on the future, we anticipate this application to be a driving force in the domain of digital note-taking and look forward to the transformative impact it will have on users worldwide.
